Do damp and mould matter? Health Impacts of Leaky Homes

Edited by Philippa Howden-Chapman, Julie Bennett & Rob Siebers

New Zealand houses — including many built in the 1990s Mediterranean style — are too often damp, cold and mouldy. In modern leaky buildings, water penetrates the building envelope and stays in the wall cavity, where it rots the wood and enables fungi to grow. This book outlines:

- the extent of damp, mouldy houses in New Zealand
- the history of our leaky buildings
- health effects — and costs — of exposure to indoor mould
- methods for measuring mould
- likely costs of fixing leaky homes
- what we still don't know about indoor mould, and recommendations for future research

172pp • A5 paperback • colour photos
ISBN 978-1-877448-89-8
RRP $29.99 • Available now

CONTRIBUTORS: Julie Bennett, Mikael Boulic, Ralph Chapman, Don Cleland, Julian Crane, Malcolm Cunningham, Jeroen Douwes, Pär Fjällström, Brett Green, Ulla Haverinen-Shaughnessy, Philippa Howden-Chapman, Aino Nevalainen, Michael O'Malley, Greg O'Sullivan, Robyn Phipps, Helena Rintala, Jason Sercombe, Euan Tovey, Caroline Shorter, Rob Siebers, Helen Viggers, Nick Waipara, Kristin Wickens, Nick Wilson.
