Long - Term Condition Management

GENA709

Primary Health Care Postgraduate Diploma/Certificate Elective Paper

This interdisciplinary paper reviews a range of effective models of care for those with long-term or chronic conditions taking account of the range of primary and integrated care settings and funding structures.

Topics covered include:

- The underlying principles of successful long-term conditions management including international and New Zealand models.
- Delivery system design and the role of team work.
- Patient and caregiver perspectives on living with chronic illness from childhood to old age.
- Introduction to self-management.
