

# PUBH 740

## Special Topic: One Health (distance taught)

**15 points | Term 1 (25 Feb–12 Apr 2019)**

**Prerequisites: Completed undergraduate degree in any discipline**

One Health is an emerging approach to understanding health issues by bringing together human, animal, and ecosystem health perspectives. This paper offers the ability to learn from Professor Jakob Zinsstag-Klopfenstein, a world expert in One Health, and will focus on the relationships between human, animal and ecosystem factors and their relationships with infectious disease.

- Explore the theoretical foundations of One Health.
- Receive an introduction to both quantitative and qualitative One Health methods.
- Review and evaluate One Health methods for the control of health issues at the animal-human interface.

Special Topic  
2019 only
