Mental Health and Illness in Primary Care

GENA710

Primary Health Care Postgraduate Diploma/Certificate Elective Paper

This interdisciplinary paper is intended to give primary health care professionals a sound basis for the recognition and management of mental health issues that commonly present in primary health care settings.

- Considers the role of mental health promotion
- Utilises a life span approach to mental health care
- Considers assessment, care planning and treatment for those with mild to moderate conditions
- Reviews current mental health status data
- Evaluates policy directions for primary care service delivery and workforce development.
