Life Between the Tides

Take a closer look at the rocky shore at low tide - you will be amazed at what you can find there, clinging to the rocks, waiting for the tide to come back in, and living in the rock pools just below the surface. To find out more about these animals and plants see: www.marinelife.ac.nz

This poster was illustrated by Corlis Schneider and produced by the New Zealand Marine Studies Centre with support from Mobil Oil. For other resources see: www.marine.ac.nz
