A Clean Energy Future

Beyond Zero Emissions, Uni. Of Melbourne, UNSW

Oz energy renewables by 2020 Services need half 2010 energy

Mostly solar + wind, storage Total cost similar to b.a.u.

Invest 3% GDP for 10 years

September 19, 14 Ian Lowe 3.

Nuclear power for NZ?

- Too expensive
- Too slow
- Limited high–grade resources
- Environmental risks
- Radioactive waste
- Weapons proliferation?
- Few benefits, high costs

Transport options

- · Public transport, bicycle
- · Rail, ship freight
- Bio-fuels: alcohols, bio-diesel
- Hydrogen from renewables
- Solar electric vehicles

September 19, 14

35

Global average fuel efficiencies [MJ / passenger kilometre, 1990]

• Car 2.91

• Bus 1.56

Diesel train 1.44

• Tram 0.79

Electric train 0.44

• Bicycle 0.06

The hydrogen car?

- Jan. 1999, Shell's hydrogen filling station [Hamburg]
- BP trialling hydrogen
- Iceland operating hydrogen fuel - cell buses, then boats, then cars...
- Moving to hydrogen economy by early 2020s

Doing nothing is not an option. Energy is vital. So we need to plan *now* for a sustainable future.

"these recent crises - fuel, food and finance - are simply the three canaries in the mine. These are the early warning signals that our current economic system is simply not sustainable."

WEF Global Agenda Summit, 2008

Limits to Growth + 30 years data

On all key parameters [population, resource use, industrial output, agricultural production and pollution] we are on "standard run". This leads to economic and ecological collapse before 2050.

"No-one has to change. Survival is optional"

September 19, 14

Ian Lowe

42

The underlying drivers

- Population growth
- Consumption per person
- Societal values

September 19, 14 Ian Lowe

New suite of values

- Domination of nature becomes ecological sensitivity
- Consumerism replaced by quality of life
- Individualism -> human solidarity

Creating our future

- not determined
- various options
- our choices
- holiday analogy
- quality of life
