

# A discussion on Walking Access Maps

Mr. George Williamson

Walking Access Commission

Abstract: George will initiate a discussion on the need for greater a-spatial and spatial information system awareness across academic departments with reference to Walking Access Maps, and then have a conversation about the issues we currently face because of:

- historic deep-rooted, manual, statutory processing cultures,
- the lack of understanding of good spatial and a-spatial data, and
- insufficient general knowledge of good information systems and reporting design.

Is this a challenge academic departments can pick up to ensure businesses are able to achieve elegant and efficient analysis and reporting from mashed up a-spatial and spatial data from previously disparate sources, including survey, legal, environmental, commercial and geography?
