Department
of Botany

Botany is...

... knowing how stable ecosystems are formed by plant and animals interactions

With a degree in Botany, you will learn about how plants, animals, and other species interact in a complex system of predatory, parasitic, commensal, and mutualistic relationships – plants and other primary producers form the base of the food chain.

Otago offers NZ's only degree in Botany

Although cultivated banana trees are sterile, a host of insects and other animals are attracted to their nectar-rich flowers.
