Te Whare Wānanga o Otāgo | University of Otago

Climate emergency mitigation and adaptation demands an “all of society” response to optimise humanity’s best-case scenario for our collective future. This seminar will discuss the impact of climate emergency on indigenous land rights and explore the pivotal role Indigenous Peoples play in meaningful climate crisis solution-building while identifying barriers to realizing Indigenous Peoples’ contribution in that such space. Using examples in a climate crisis context, the audience will be invited to consider the urgent relevance of Indigenous-led struggles for the protection of their lands and territories, and how broader civil society can and should support Indigenous Peoples’ efforts.
