

Otago Spotlight Series
Cancer Research

Genomic health for personalised cancer care and prevention

Logan Walker, PhD

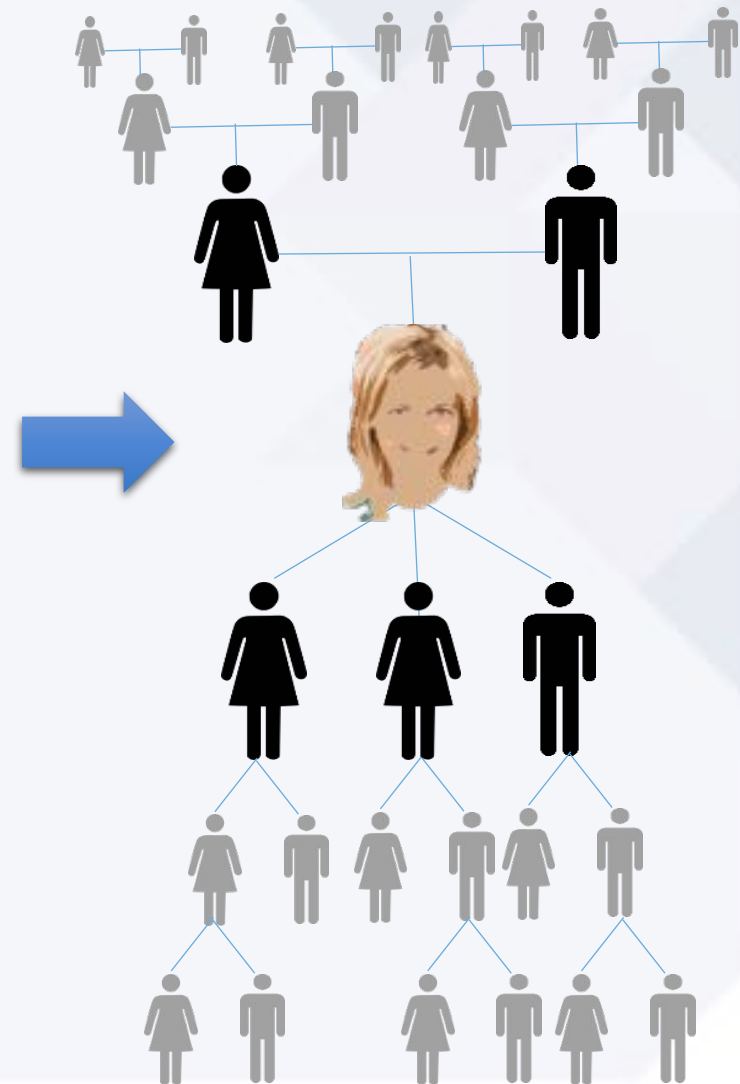

Mackenzie Cancer Research Group

University of Otago Christchurch

Who are most vulnerable to breast cancer?

otago.ac.nz/cancer-research

Breast cancer risk factors

Breast cancer is not caused by

- wearing underwire bras
- implants
- deodorants/antiperspirants
- mammograms
- caffeine
- microwaves
- cell phones

Breast cancer statistics in NZ

Population statistics

~3000 women develop breast cancer in NZ each year

How many affected women carry a high-risk mutation?

Genetic screening statistics

300-350 women undergo genetic testing each year

<20% tests positive

~5-10% tests unclear

Future of genetic screening

Whole gene sequencing

Gene panel screening

Greater number of individuals screened

Greater number of reported
unclassified variants

otago.ac.nz/cancer-research

BRCA Challenge Project

Standardise data collection,
variant interpretation and
clinical genetic databases

Classifying genetic variants

Reported variant

ENIGMA

(Evidence-based Network for the Interpretation of Germline Mutant Alleles)

Multifactorial analysis

Tumour type

Family history and
segregation

Co-occurrence

Molecular biology

The Angelina Jolie effect

- “*My doctors estimated that I had an 87 percent risk of breast cancer and a 50 percent risk of ovarian cancer, although the risk is different in the case of each woman.*”
- Why do *BRCA1* and *BRCA2* mutation carriers vary in risk?

Genetic modifiers of risk

Genetic data from
2500 *BRCA1*
mutation carriers

Genome-wide
association study

$$L = \prod_{i=1}^m P(g_i | y_i(t_i)) = \prod_{i=1}^m \frac{P(g_i)P(y_i(t_i)|g_i)}{P(y_i(t_i))}$$

$$= \prod_{i=1}^m \frac{P(g_i)P(y_i(t_i)|g_i)}{\sum_k P(g_i = k)P(y_i(t_i)|g_i = k)}$$

$$= \prod_{i=1}^m \frac{\tau_{g_i} \exp[-\Lambda_0(t_i) \exp(\beta g_i) + O_i \beta g_i]}{\sum_k \tau_k \exp[-\Lambda_0(t_i) \exp(\beta k) + O_i \beta k]}$$

$$U = \frac{\partial \log L}{\partial \beta} \Big|_{\beta=0}$$

$$= \sum_{i=1}^m (g_i - \bar{g}) [O_i - \Lambda_0(t_i)]$$

New findings:
Breast Cancer
GeneX
Ovarian Cancer
GeneY

Validation

>20,000 *BRCA1*
mutation carriers
