

**Safe Method of Use**  
**Compounds that have Chronic Toxicity**  
**(HSNO Sub-classes 6.5-6.9)**

	6.5 Sensitizers	6.5A: Respiratory Sensitizer 6.5B: Contact Sensitizer
	6.6 Mutagens	6.6A: Known Mutagen 6.6B: Suspected Mutagen
	6.7 Carcinogens	6.7A: Known Carcinogen 6.7B: Suspected Carcinogen
	6.8 Reproductive/ Developmental Toxins	6.8A: Known reproductive or developmental toxin 6.8B: Suspected reproductive or developmental toxin 6.8C: Effects on or via lactation
	6.9 Target Organ/System Toxins	6.9A: Known target organ/system toxin 6.9B Suspected target organ/system toxin

*HSNO Categories 6.5 to 6.9 (compounds with chronic toxicity) cover a wide range of chemicals, for which an exhaustive list cannot be supplied.*

*Always consult SDS sheets prior to handling any chemical, observe precautions and follow the recommendations for their handling.*

*Lists of some carcinogens and reproductive toxins are given in Appendices 1 and 2.*

*Always consult an SDS database before using a chemical for the first time.*

*Please also note that chemicals that have primary HSNO classification of Class 3, 4, 5 or 8 may also be carcinogenic and/or reproductive toxins or may have adverse side effects resulting from chronic exposure.*

## **A. INCOMPATIBILITIES**

- All HSNO Class 6 compounds (including HSNO 6.5 compounds) *should* not be stored with HSNO Class 3, 4, 5 or 8 compounds.

## **B. STORAGE**

- All HSNO Class 6.5 compounds that are classified as known carcinogens ie IARC Category 1 compounds will be kept in secure storage.
- All HSNO Class 6 compounds *should* not be stored with HSNO Class 3, 4, 5 or 8 compounds.

## **C. USE**

- SDS Sheets *shall* be consulted for correct handling of individual toxic compounds.
- Gloves of the appropriate impermeable material *shall* always be used when handling gases, liquids, solids or dusts that are known possess chronic toxic effects.
- Fume Hoods *shall* always be used when handling gases, liquids or dusts that are known possess chronic toxic effects.

## **D. PERSONAL PROTECTIVE EQUIPMENT**

- Fume hoods *shall* always be used when handling toxic compounds that are gases, liquids, solids or dusts.
- Chemically resistant gloves *shall* be worn when handling toxic compounds. Consult SDS sheet and Section on Personal Protective Equipment to determine resistance of glove material to the compound you propose to handle.

## **E. DISPOSAL**

- Toxic compounds *shall* never be discharged to sewer.
- Disposal of toxic compounds *shall* be undertaken by a licensed chemical waste contractor.
- Please contact Hazards and Containment Manager to arrange for disposal.

## **F. SMALL SPILLS**

- Consult SDS for correct clean up procedure
- Use correct gloves

- If liquid, use absorbent material in spill kits to wipe up – wiping from outside of spill toward centre.
- Place used absorbent material in impermeable/airtight container
- Solids can be placed directly into an impermeable/airtight container
- Inform the Laboratory Manager and arrange for immediate disposal

## Appendix 2: Carcinogens and possible carcinogens

**The following is a list of IARC listed carcinogens. The list is not exhaustive and SDS must be consulted.**

The following are the relevant IARC Criteria:

- Group 1        The agent is carcinogenic to humans- sufficient evidence between exposure to the agent and human cancer
- Group 2A       The agent is probably carcinogenic in humans – limited evidence of carcinogenicity in experimental animals
- Group 2B       The agent is possibly carcinogenic in humans – limited evidence in humans but absence of sufficient evidence in experimental animals or inadequate evidence in humans (human data not available) but sufficient evidence in experimental animals
