RADT 313 Professional Development	78
RADT 314 Radiation Therapy and Oncology III	82
RADT 315 Radiation Therapy Planning Concepts III	85

Appendix A - Moderators

Appendix B - Monitor

Appendix C - Academic Board Approval

Appendix D - NZQA Approval

CUAP Approval

1. Aims of the Programme

1.1 General Aims

The Bachelor of Radiation Therapy (BRT) aims to produce graduates with the following attributes:

- 1.1.1 clinical competence in radiation therapy, demonstrating safe and professional practice.
- 1.1.2 a sound understanding of the theoretical basis for clinical practice.
- 1.1.3 excellent interpersonal skills in the demonstration of empathy and sensitivity to all patients.
- 1.1.4 excellent communication skills, both oral and written in communicating with colleagues and the health care team.
- 1.1.5 the ability to act independently when professionally appropriate as well as co-operatively with colleagues and other health care team members.
- 1.1.6 sound analytical skills to enable flexible and creative responses to the changes and challenges presented by clinical practice.
- 1.1.7 the skills of the “reflective practitioner” in being willing and able to review their own clinical competence and be responsive to the need for personal and professional change.
- 1.1.8 the ability to apply the principles of research as a foundation for on-going personal and professional development.
- 1.1.9 an awareness of the importance of the Treaty of Waitangi to the delivery of health care in New Zealand.

Cognitive skills will be progressively enhanced throughout the learning activities that will develop both an academic foundation and technical skill. The student will deal with problems of increasing complexity, recognising increasing contextual dimensions and the recognition of a range of possible solutions. This will involve increasingly proficient and perceptive interpersonal skills.

2. Occupational Conditions

During the programme, students must undertake approved work experience hours.

- The Work Experience hours complement the formal academic clinical components of the Bachelor of Radiation Therapy i.e. Stage I Clinical Placements, Radiation Therapy Practice II and Radiation Therapy Practice III, and fully prepares students for clinical practice upon qualifying.
- Work Experience hours must be completed as per the Bachelor of Radiation Therapy academic calendar.
- Students will have completed approximately 2200 clinical hours (clinical studies plus work experience) at the completion of the degree.

3. Programme Development

Relocation to the University of Otago

With the dis-establishment of Central Institute of Technology (CIT) in June 2001, the Bachelor of Health Science (Radiation Therapy) relocated to the University of Otago's Wellington School of Medicine and Health Science. The programme was renamed the Bachelor of Health Sciences (Medical Radiation Therapy). Effective 1st January 2011 the programme was then renamed the Bachelor of Radiation Therapy to clarify the focus of this vocational programme, and to raise the profile within the University of Otago.

The radiation therapy profession and the University of Otago have taken the opportunity to develop the programmes in a university environment. This gives opportunities for study and research at undergraduate and postgraduate levels in an internationally recognized university focused on health sciences.

Background

The Bachelor of Health Science (Radiation Therapy) programme was a development of the National Diploma in Medical Radiation Therapy – which developed from the CIT's Diploma in Therapeutic Radiography.

The radiation therapy profession had, for a number of years, considered that a degree level qualification should be available in New Zealand. In 1990 a survey of the profession was conducted in which 81% of the respondents favoured a degree as the standard qualification. The British profession had a degree in radiation therapy for many years as had Australia. The USA moved in this direction also. Canada had announced a requirement for a degree level qualification as a pre-requisite for registration by the year 2005. For New Zealand graduates to maintain parity with their overseas counterparts they required a bachelor's level degree. Between 50-75% of New Zealand graduates in radiation therapy gain overseas experience in Australia and the United Kingdom.

A degree in Diagnostic Imaging was developed by Unitec and commenced in 1995. Manawatu Polytechnic (now UCOL) offer the Bachelor in Applied Science (Medical Imaging Technology), which commenced in 1996. A degree was also developed and implemented by CPIT (Christchurch Polytechnic Institute of Technology) in 1998. For radiation therapy, the implementation of the Bachelor of Health Science (Radiation Therapy) at CIT (Central Institute of Technology) allowed radiation therapists to maintain parity with their professional colleagues in New Zealand.

The therapy degree was developed in consultation with the radiation therapy profession. A sub-committee of the Radiation Therapy Advisory Committee was formed which had the major responsibility for both the structure and content of the degree programme.

In 2005 a University of Otago led Curriculum Review commenced and the revised curriculum was implemented from 2009 onwards. This curriculum has been developed after extensive consultation with the profession, university, stakeholders and external reviewers.

4. Programme Description

The curriculum is designed so that papers are taught as part of an integrated and coherent structure, with a consistent overall process of learning and problem solving and a series of vertical and horizontal learning areas or strands.

4.1 The Three Stage Programme

The Bachelor of Radiation Therapy comprises three stages. Generally each stage will be completed in one year's full time study.

A new curriculum has been implemented, commencing with Stage I in 2009, Stage II in 2010 and Stage III in 2011.

All papers are compulsory

4.2 Stage I

Stage I consists of the following papers:

Paper Title	Points
RADT 111 Anatomy & Imaging	30
RADT 112 Cancer Cell Biology	10
RADT 113 Health & Human Behaviour	9
RADT 114 Healthcare Communication	9
RADT 115 Radiation Technology I	18
RADT 116 Radiation Therapy and Oncology I	30
RADT 117 Radiation Therapy Planning Concepts I	14

1 point is equivalent to 12.5 hours of student learning

4.3 Stage II

Stage II consists of the following papers:

Paper Title	Prerequisite	Points
RADT 211 Radiation Therapy Practice II	All stage I papers	60
RADT 212 Principles of Research	All stage I papers	6
RADT 213 Advanced Healthcare Communication	RADT 113 and 114	10
RADT 214 Radiation Technology II	RADT 115	16
RADT 215 Radiation Therapy and Oncology II	RADT 116	10
RADT 216 Radiation Therapy Planning Concepts II	RADT 116 and 117	18

1 point is equivalent to 12.5 hours of student learning

4.4 Stage III

Stage III consists of the following papers:

Paper Title	Prerequisite	Points
RADT 311 Radiation Therapy Practice III	RADT 312, 313, 314, 315	60
RADT 312 Literature Analysis	RADT 212	20
RADT 313 Professional Development	RADT 213	10
RADT 314 Radiation Therapy and Oncology III	RADT 215	12
RADT 315 Radiation Therapy Planning Concepts III	RADT 215 and 216	18

1 point is equivalent to 12.5 hours of student learning

4.5 Integration of a Process Curriculum

Vertical and horizontal integration of the programme is important to enable students to develop increasingly complex cognitive, affective and psychomotor skills. This integration has been achieved by the overall programme design which links paper content and learning outcomes within and across stages.

Integration will also be achieved by the extensive use of case studies, projects, problem solving exercises, seminars and through clinical situations. Sequencing will guide the student to obtain sufficient background information and level of skill to deal with progressively more complex material and situations.

Integration will require good communication among lecturers. To this end the Head of Department is responsible for regular and frequent communication between members of the teaching team.

4.6 Learning, Interacting and Self-Management

The way in which the student learns and interacts with others (staff, students, patients and other professionals) throughout the programme is considered to be the key to the achievement of the aims concerning personal growth. Students will be encouraged, from the outset, to develop the skills of an independent learner and to reflect upon their learning. The ability to self-assess is an integral part of the programme's objectives.

It is essential to facilitate the early adaptation of students to expectations regarding their role in the learning process and their ability to interact with others.

Exercises in independent learning and critical thinking are introduced at the start of the programme. Developing effective verbal and written communication skills is an important aim throughout the programme. There are papers which specifically address these areas, such as the Behavioural Science papers. However, there is also a formal expectation of early application of the principles in all courses in the first stage and beyond.

In all papers, students will be required to investigate topic areas to a greater depth than that provided during class contact hours. To this end, formal class contact will usually be no more than 20 hours per week.

4.7 Accessing a Specific Academic Base Biological Sciences

Students will develop the ability to understand the basic systems of the human body and how these interact.

This is delivered through the anatomy and cancer cell biology papers. The imaging of anatomy is introduced at the beginning of Stage I and forms a foundation for the *Radiation Therapy & Oncology* and *Radiation Therapy Planning Concepts* papers.

4.8 Behavioural Science

Students need to have access to knowledge from behavioural science and healthcare communication to enable them to perform as competent professionals in the field of radiation therapy.

This knowledge is essential to enable graduates to understand the context of illness and work with clients, colleagues and others they may interact with while performing as a professional in the field. These skills will be integrated into the *Radiation Therapy Practice* and *Healthcare Communication* papers as well as the *Health and Human Behaviour* components.

4.9 Physics and Allied Sciences

Since most radiation treatment is provided using advanced technology students require a sound knowledge of physics as well as sufficient understanding of radiation technology to enable them to perform in a professional manner. Specialist lecturers will be employed to ensure that the latest information is presented to students. The papers relevant to this area are the *Radiation Technology I & II*.

4.10 Radiation Therapy Practice

This section of the curriculum, which includes the Stage I clinical placements, the Stage II *Radiation Therapy Practice* and Stage III *Radiation Therapy Practice* papers, is designed to prepare the student for practice in a modern clinical setting. The clinical practice papers are designed to integrate the students' learning to a point where practical skills and theoretical understanding merge. Students have the opportunity to develop their clinical skills under supervision in well equipped radiation oncology departments in Auckland, Auckland Private, Waikato, Palmerston North, Wellington, Christchurch, Christchurch Private and Dunedin.

4.11 Research

As professionals in the field of radiation therapy graduates must be able to critically analyse research published by others. To this end students will study the principles of good research methodologies. While these principles are covered in the *Principles of Research* and *Literature Analysis* papers the concepts will be carried through all the subjects of the final stages of the programme.

5. Timing of the Programme

5.1 Duration of the Course

The Bachelor of Radiation Therapy is a three year full time programme.

5.2 Composition of Each Stage

5.2.1 Stage I

31 weeks attending classes at the Department of Radiation Therapy, University of Otago, Wellington.

2 weeks clinical placement with a clinical provider.

5.2.2 Stage II

1 semester Radiation Therapy Practice with a clinical provider.

1 semester attending classes at the Department of Radiation Therapy, University of Otago, Wellington.

5.2.3 Stage III

1 semester attending classes at the Department of Radiation Therapy, University of Otago, Wellington.

1 semester Clinical Studies with a clinical provider.

6. Structure of the Programme

The programme consists of 4500 notional hours of student learning divided into three stages.

6.1 Stage I

RADT 111	Anatomy & Imaging
RADT 112	Cancer Cell Biology
RADT 113	Health & Human Behaviour
RADT 114	Healthcare Communication
RADT 115	Radiation Technology I
RADT 116	Radiation Therapy and Oncology I
RADT 117	Radiation Therapy Planning Concepts I

6.2 Stage II

RADT 211	Radiation Therapy Practice II
RADT 212	Principles of Research
RADT 213	Advanced Healthcare Communication
RADT 214	Radiation Technology II
RADT 215	Radiation Therapy and Oncology II
RADT 216	Radiation Therapy Planning Concepts II

6.3 Stage III

RADT 311	Radiation Therapy Practice III
RADT 312	Literature Analysis
RADT 313	Professional Development
RADT 314	Radiation Therapy and Oncology III
RADT 315	Radiation Therapy Planning Concepts III

7. Assessment

7.1 Assessment Philosophy

All assessment tasks will allow students to demonstrate their achievement of the learning outcomes being assessed.

This philosophy will be implemented by the use of the following strategies:

- All assessment tasks will be appropriate for the level and nature of the learning outcomes being assessed.
- Each assessment task will be clearly stated.
- Dates for assessments will be advised to students in advance. The dates for all summative assessments will be published at the beginning of each semester.
- Self and peer assessment will be encouraged and used whenever appropriate.
- Formative assessments will be carried out to identify difficulties students may be encountering, and to provide frequent feedback on learning progress.
- When it is appropriate for students work to be returned after marking, it will be returned as soon as practical.

7.2 Assessment Pattern

Students must have a current approved comprehensive first aid certificate before taking a final clinical or written assessment. This is relevant for Stage I, II and III.

RADT 111: Anatomy & Imaging

Summative assessment will consist of the following:

- one test = 15% of total mark
- one test = 15% of total mark
- one test = 15% of total mark
- one test = 15% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to sit the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

RADT 112: Cancer Cell Biology

Summative assessment will consist of the following:

- one test = 30% of total mark
- one test = 30% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

RADT 113: Health & Human Behaviour

Summative assessment will consist of the following:

- one assignment = 25% of total mark
- one assignment = 35% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to sit the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

RADT 114: Health Care Communication

Summative assessment will consist of the following:

- one assignment = 50% of total mark
- one observational analysis = 50% of total mark

Formative assessment will consist of participation in a communication skills workshop and submission of a written self-reflection assignment in order to meet coursework terms.

A pass will be awarded to all students who gain 50% overall in the coursework and participate in the communication skills workshop.

RADT 115: Radiation Technology I

Summative assessment will consist of the following:

- one test = 20% of total mark
- one test = 20% of total mark
- one test = 20% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination.

A pass will be awarded to all students who gain a minimum of 50% in the examination and 50% overall.

RADT 116: Radiation Therapy and Oncology I

Summative assessment will consist of the following:

- one test = 20% of total mark
- one test = 20% of total mark
- one assignment = 20% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework and the clinical assignment must be successfully completed to be eligible to take the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

RADT 117: Radiation Therapy Planning Concepts I

Summative assessment will consist of the following:

- one test = 30% of total mark
- one assignment = 30% of total mark
- one viva = 30% of total mark
- one portfolio = 10% of total mark

A pass will be awarded to all students who gain 50% minimum overall.

RADT 211: Radiation Therapy Practice II

Summative assessment will consist of all outcomes within each of the three domains:

- one rotational assessment (CT/sim) = Pass/Fail
- one rotational assessment (planning) = Pass/Fail
- one rotational assessment (treatment) = Pass/Fail

And

- one clinical journal = Pass/Fail

A pass will be awarded to all students who gain a pass in each component. Students will need to gain 640 clinical hours for the semester in which they have enrolled.

Reassessment:

- Reassessment can occur in two domains for each enrolment of the paper.
- If a student fails all three domains they are not eligible for reassessment and fail the paper overall.
- Reassessment can occur for the clinical journal.

RADT 212: Principles of Research

Summative assessment will consist of the following:

- one assignment (quantitative) = 50% of total mark
- one assignment (qualitative) = 50% of total mark

A pass will be awarded to all students who gain 50% overall.

RADT 213: Advanced Healthcare Communication

Summative assessment will consist of the following:

- one case study = 40% of total mark
- one assignment = 30% of total mark
- one assignment = 30% of total mark

Formative assessment will consist of participation in a communication skills workshop and submission of a written self-reflection assignment in order to meet coursework terms.

A pass will be awarded to all students who gain 50% overall and participate in the communication skills workshop.

RADT 214: Radiation Technology II

Summative assessment will consist of the following:

- one assignment = 20% of total mark
- one test = 20% of total mark
- one test = 20% of total mark

- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination.

A pass will be awarded to all students who gain a minimum of 50% in the examination and 50% overall.

RADT 215: Radiation Therapy and Oncology II

Summative assessment will consist of the following:

- one group presentation = 30% of total mark
- one test = 30% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

RADT 216: Radiation Therapy Planning Concepts

Summative assessment will consist of the following:

- one assignment (dosim/calcs/imaging) = 20%
- one test (radiobiology) = 20%
- one VIVA (60% pass mark) = 40%
- one portfolio = 20%

One reassessment can occur if the pass mark of 60% is not achieved in the dosimetry viva.

A pass will be awarded to all students who gain 50% minimum overall.

RADT 311: Radiation Therapy Practice III

Summative assessment will consist of all outcomes within each domain:

- assessment (CT/sim) = Pass/Fail
- assessment (planning) = Pass/Fail
- assessment (treatment) = Pass/Fail

A pass will be awarded to all students who gain a pass in each domain.

Reassessment:

- Reassessment can occur in two domains for each enrolment of the paper.
- If a student fails all three domains they are not eligible for reassessment and fail the paper overall.

RADT 312: Literature Analysis

Summative assessment will consist of the following:

- quantitative assignment = 40%
- qualitative assignment = 40%
- poster discussion = 20%

A pass will be awarded to all students who gain 50% overall.

RADT 313: Professional Development

Summative assessment will consist of the following:

- one assignment (ethics) = 50% of total mark
- one assignment (professional issues) = 50% of total mark

Formative assessment will consist of participation in a communication skills workshop and submission of a written self-reflection assignment in order to meet coursework terms.

A pass will be awarded to all students who gain 50% overall and participate in the communication skills workshop.

RADT 314: Radiation Therapy and Oncology III

Summative assessment will consist of the following:

- one test = 30% of total mark
- one assignment = 30% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

RADT 315: Radiation Therapy Planning Concepts III

Summative assessment will consist of the following:

- one assignment (dosimetry) = 20%
- one radiobiology test = 20%
- one dosimetry viva (67% pass mark) = 40%
- one portfolio = 20%

One reassessment can occur if the pass mark of 67% is not achieved in the dosimetry viva.

A pass will be awarded to all students who gain 50% overall.

7.3 Assessment Standards

The overall standards are laid out in the *Aims of the Programme* as the attributes of the graduate of the programme. (See 1. Aims of the Programme, p.1).

These aims have been developed in close association with the profession through the Curriculum Review Committee and the Radiation Therapy Board of Studies and Examinations.

7.4 Moderators

Internal moderation occurs for each paper within the Department of Radiation Therapy. One external moderator is appointed from the profession to moderate radiation therapy focussed written examinations. External specialist lecturers moderate other papers, e.g. Cancer Cell Biology. A clinical radiation therapist moderates a sampling of clinical journals.

7.5 Monitoring

The Medical Radiation Technologists Board monitors the Bachelor of Radiation Therapy in accordance with guidelines, under the Health Practitioners Competence Assurance Act, 2003.

8. Procedures for Changes to the Programme

There are three levels of change in the programme which can take place:

8.1 Minimal Changes

Small alterations to the programme will be implemented within the Department of Radiation Therapy.

8.2 Minor Changes

Where the changes are more significant, but do not involve the structure of the programme they will be referred on to the Radiation Therapy Board of Studies and Examinations. Minutes from these minutes refer issues to the Health Sciences Divisional Board.

8.3 Major Changes

Any change to the overall structure will be referred to CUAP for approval following approval by the University of Otago Senate.

9. Management of the Programme

9.1 Programme Co-ordination

The Director and Head of Department has responsibility for the overall co-ordination of the programme.

9.2 Paper Convenors

Paper Convenors are responsible for the efficient co-ordination and delivery of papers. The internal moderators work with the Paper Convenors on content and assessment.

9.3 Year Leaders

Year Leaders have an overall responsibility for the students in a particular stage of the course. Responsibilities include pastoral care, staff/student meetings and facilitating the Professional Attitudes process.

10. Relationship to Other Programmes

10.1 Overseas Undergraduate Qualifications

A number of New Zealand radiation therapists have gained degree level qualifications in radiation therapy. The most popular programmes were the BHSc – Conversion Programme from the Central Institute of Technology and the BSc (Radiography) Conversion Programme from the Anglia Polytechnic University in England. These programmes and others such as the BSc(Hons) Radiotherapy from Southbank University, London, require students to attain high levels of competency, the skills of the reflective practitioner and the skills of critical analysis in relation to research. The outcomes of these qualifications are similar to those of the Bachelor of Radiation Therapy programme.

New Zealand graduates of the Bachelor of Radiation Therapy (or equivalent) are eligible to apply to work in several countries including the United Kingdom, Ireland, Canada, Australia (after one year) and many Arab states.

10.2 New Zealand Postgraduate Qualifications

There are a number of postgraduate qualifications available to the graduates from the Bachelor of Radiation Therapy.

The University of Otago offers the Bachelor of Radiation Therapy (Honours), the Postgraduate Certificate in Health Sciences endorsed in Radiation Therapy Advanced Practice and also postgraduate certificates, diplomas, masters and PhD programmes.

11. Programme Regulations

11.1 Entry Requirements

The Radiation Therapy Admissions Committee shall consider applications from candidates in the following categories:

- Admission with secondary school qualification
- Admission with one year of tertiary study
- Admission with two or more years of tertiary study
- Admission with tertiary qualification(s)
- Admission with alternative qualifications and/or experience

International students are not eligible to apply for the Bachelor of Radiation Therapy.

Single Programme Preference

Single Programme Preference is available for students wishing to apply for Radiation Therapy. Note this is not applicable to candidates applying via 'Admission with secondary school qualification'.

Goal – The programme, with support of its professional body, wishes to recruit students who have signalled a strong commitment to its programme.

Admissions Committees will firstly select from those applicants who are applying under Single Programme preference. Thereafter if domestic places are still available, the Committee will select from the group of applicants that have applied to multiple Health Sciences restricted entry programmes.

Main Categories

- **To gain admission from secondary school, a candidate will:**
 - Have fulfilled the University's entrance requirements, **and**
 - Have attained a satisfactory standard determined by the Radiation Therapy Admissions Committee in NCEA Level 2 (or equivalent), **and**
 - Have completed or be completing the following subjects in NCEA Level 3 (or equivalent) to a satisfactory standard (minimum of 16 credits) as determined by the Radiation Therapy Admissions Committee:
 - English, **or**
 - Te Reo Māori, **or**
 - Te Reo Rangatira, **or**
 - Classics, **or**
 - History, **or**
 - Geography, **or**
 - Art History
- And
- Mathematics, **or**
 - Statistics, **or**
 - Calculus
- And
- Physics, **or**
 - Biology

Applicants are initially reviewed based on their Level 2 (or equivalent) performance and subjects taken for NCEA Level 3 (or equivalent). Applicants must have completed NCEA Level 3 (or equivalent) within the last five years.

Final entry is subject to NCEA Level 3 results (or equivalent).

- ***To gain admission with one year of tertiary study, a candidate will:***
 - Have undertaken one year of relevant university study, **and**
 - Have completed relevant papers to a standard determined annually by the Radiation Therapy Admissions Committee—normally with a minimum average of 65% or better across all papers
 - Single programme preference applicants must normally achieve a minimum average of 65% or better across all papers.

- ***To gain admission with two or more years of tertiary study, a candidate will:***
 - Have undertaken two or more years of relevant university study, **and**
 - Have completed their papers to a standard determined annually by the Radiation Therapy Admissions Committee—normally B- (grade point average (GPA) of 4) (Otago equivalent)
 - Single programme preference applicants must normally achieve a B- (grade point average (GPA) of 4) (Otago equivalent) or better across all papers.

- ***To gain admission with a tertiary qualification, a candidate will:***
 - Have completed the requirements of a relevant university degree to a standard determined annually by the Radiation Therapy Admissions Committee —normally B- (grade point average (GPA) of 4) (Otago equivalent)
 - Single programme preference applicants must normally achieve a B- (grade point average (GPA) of 4) (Otago equivalent) or better across all papers.

- ***To gain admission with alternative qualifications and/or experience, a candidate will:***
 - Possess not less than five years of experience in a health-related profession, of which at least two years must have been in New Zealand, **and/or**
 - Demonstrate academic ability acceptable to the Radiation Therapy Admissions Committee—normally B- (grade point average (GPA) of 4) (Otago equivalent), **and**
 - Satisfy any other criteria set by the Radiation Therapy Admissions Committee
 - Single programme preference applicants must normally achieve a B- (grade point average (GPA) of 4) (Otago equivalent) or better across all papers.

Sub-categories

The University of Otago is committed to initiatives that increase the number of indigenous Maori and indigenous Pacific Island graduates. The Division of Health Sciences is focused on ensuring that New Zealand's diverse health workforce needs are met, to honouring the principles of the Treaty of Waitangi/Tiriti o Waitangi and promoting academic equity for under-represented groups.

Applicants may also be considered in one or both of the following sub-categories:

1. Indigenous Maori
2. Indigenous Pacific

Demonstration of suitability to the profession by interview

Selection for interview is based on: academic performance, department visit and handwritten statement to a standard determined by the Radiation Therapy Board of Studies.

For a student whose application for admission is based on qualifications gained outside New Zealand and whose first language is not English or Maori, evidence of such competence and understanding to be supplied shall be in the form of certified results in:

- the International English Language Test (IELT) with a score of not less than 7.5 in the academic band, with a score of 8 or better in the listening band and 8 or better in the speaking band. This test is to be taken in New Zealand.
- In general students will have clinical placements with Clinical Providers which operate an oncology unit. This is to ensure that there is adequate access to an appropriate clinical environment. An exception to this may be made provided the applicant can provide evidence that she or he can obtain the required clinical experience and tuition.
- In Students are required to hold a current comprehensive first aid certificate on entry to the programme. This certificate is to be maintained throughout the duration of the programme.

Note: Student numbers will be limited to the availability of clinical placements.

11.2 Admission to the Course

- (a) Admission to the course for the degree of Bachelor of Radiation Therapy shall be determined by the Pro Vice-Chancellor (Health Sciences) on the advice of the Radiation Therapy Admissions Committee.
- (b) The number of candidates to be admitted to the first year of the course will be determined by the number of places available for clinical education.
- (c) Candidates will be selected by the Radiation Therapy Admissions Committee on the basis of their academic record and their interview.

11.3 Structure of the Programme

- (a) Every programme of study shall satisfy the requirements set out in the Schedule of papers for the degree and shall normally be pursued over three years of full-time study.
- (b) Candidates will not normally be permitted to enrol in any papers of a year until all papers of the preceding year have been passed.
- (c) Students will be expected to complete the programme in five years or less. Students will need a clinical placement before re-enrolling in a clinical paper.

11.4 Credits and Exemptions

The Radiation Therapy Board of Studies and Examinations may grant such credits and exemptions as it deems appropriate for work done previously by a candidate.

11.5 Attendance

- Students are expected to attend all classes unless excused on medical or other acceptable grounds. If a student cannot attend class they must contact Reception on Ph: 385 5475 **PRIOR** to the class.
- Information on attendance will be made available to the appropriate Clinical Provider.
- A medical certificate will be required from any student who is absent from class for **more** than two days, due to illness.

11.6 Professional Attitudes

Throughout the year you will be formatively assessed on Professional Attitudes, as per the following form. This information may be available to Clinical Providers and is an important part of the programme.

11.7 Request for Leave

- Whilst at the University of Otago, Wellington; all requests for leave from the programme are to be considered by the Head of Department (form to be completed in consultation with the Year Leader)
- Whilst on clinical placement, all requests for leave from the programme are to be considered by the Clinical Educator (form to be completed in consultation with the Clinical Tutor)

11.8 Assessments

- (a) Students will be given a range of formative assessments throughout the year as a basis for determining progress.
- (b) Students must complete all coursework requirements, which include formative and summative assessments.

- (c) Extensions to coursework assessments may be granted by Paper Convenors in consultation with the Year Leader (evidence may need to be provided).

If coursework assessments are late:

- Form to be completed (based on exam special consideration form)
- Provide evidence if possible to support late submission
- This is considered by the Paper Convenor in consultation with the Year Leader.

Outcomes:

- Reason for late submission is accepted
- Reason for late submission is not accepted and a penalty to the assessment mark may be applied
- HOD to be informed of situations as appropriate.

- (d) In the case of illness at the time of a test, the student must contact Reception on Ph: 385 5475 **PRIOR** to the start of a test. A medical certificate must be presented (dated the day of the test) to the Head of Department before an alternative test will be arranged. Failure to observe this procedure may result in the student being refused an opportunity to sit the test, and therefore receive a score of zero for it.
- (e) Students who are refused terms will normally be required to repeat the paper as a whole, subject to approval by the Radiation Therapy Board of Studies and Examinations.

Submission of Previously Assessed Work

- (f) Any student who attempts to pass off their own work, either in part or whole, which has previously been assessed in the same or another paper, **as original work** will receive no assessment result for that work, nor will they have an opportunity to resubmit the work for that assessment. In addition, the student may be subject to disciplinary action.

Plagiarism

- (g) Students should make sure that all submitted work is their own. Plagiarism is a form of dishonest practice. Plagiarism (including being party to someone else's plagiarism) is defined as copying or paraphrasing another's work, whether intentionally or otherwise, and presenting it as one's own.

In practice this means plagiarism includes any attempt in any piece of submitted work (e.g. an assignment or test) to present as one's own work the work of another (whether of another student or a published authority).

Any student found responsible for plagiarism in any piece of work submitted for assessment shall be subject to the University's dishonest practice regulations which may result in various penalties, including forfeiture of marks for the piece of work submitted, a zero

grade for the paper, or in extreme cases exclusion from the University.

General

- (h) Any student who attempts to deceive or practice deceit, or obtain unfair advantage by their actions as a student may be subject to disciplinary action.

11.9 Reassessment Policy

- Radiation Therapy Practice II
 - reassessment can occur for the clinical journal
 - reassessment can occur in two domains for each enrolment of the paper
 - if a student fails all three domains they are not eligible for reassessment and fail the paper overall.
- Radiation Therapy Planning Concepts II
 - one reassessment can occur if the pass mark of 60% is not achieved in the dosimetry viva.
 - any student requiring a viva reassessment will only be able to gain a final mark of 24/40 (60% pass mark). The purpose of the reassessment is to gain further information to determine if the student has the required knowledge to pass the paper – it may be that a global perspective is necessary to achieve this. However the final grade, if it is deemed the student is able to pass will be 24/40 (the minimum pass mark)
- Radiation Therapy Practice III
 - reassessment can occur in two domains for each enrolment of the paper.
 - if a student fails all three domains they are not eligible for reassessment and fail the paper overall.
- Radiation Therapy Planning Concepts III
 - one reassessment can occur if the pass mark of 67% is not achieved in the dosimetry viva.
 - any student requiring a viva reassessment will only be able to gain a final mark of 33.5/50 (67% pass mark). The purpose of the reassessment is to gain further information to determine if the student has the required knowledge to pass the paper – it may be that a global perspective is necessary to achieve this. However the final grade, if it is deemed the student is able to pass will be 33.5/50 (the minimum pass mark).

11.10 Examinations

- (a) Every candidate must gain terms before being admitted to examinations. This is defined as at least a 50% pass in the coursework component, and have met all coursework requirements.
- (b) Students will need to achieve at least 50% in the examination to be eligible to be awarded a Pass overall.
- (c) There will be no aegrotat passes, although students may be eligible to apply for special consideration for a deferred examination.

- (d) Candidates who fail to gain terms shall subsequently pursue a course of study approved by the Radiation Therapy Board of Studies and Examinations.
- (e) A candidate who fails any paper may, on the recommendation of the Radiation Therapy Board of Studies and Examinations, be admitted to a special examination.

11.11 Awarding of Degree

Candidates must pass all papers in the programme to be awarded the Bachelor of Radiation Therapy degree by the University of Otago.

11.12 Withdrawal from the Programme

A candidate who withdraws from the course must obtain the approval of the Radiation Therapy Board of Studies and Examinations. Applications for readmission must be submitted to the Radiation Therapy Board of Studies and Examinations by 1 November in the year prior to that for which readmission is sought.

11.13 Exclusion from the Programme

- (a) Any candidate who fails to complete the requirements for a paper in two academic years may be excluded by the Board of the Division of Health Sciences on the recommendation of the Radiation Therapy Board of Studies and Examinations.
- (b) Any student who, during the course of their studies, is
 - i. subject to criminal charges;
 - ii. subject to disciplinary proceedings of the University or of a professional body; or
 - iii. found to have an issue in connection with their mental or physical health that could adversely affect their fitness to practise; or
 - iv. found to have failed to declare a matter covered by (b)(i)-(iii),

may be excluded from further study towards the degree by the Academic Board of the Division of Health Sciences on the recommendation of the Radiation Therapy Board of Studies and Examinations.

11.14 Variations

The Pro-Vice-Chancellor (Health Sciences) may in exceptional circumstances approve a course of study which does not comply with these regulations.

PAPER DESCRIPTORS

STAGE ONE PAPERS

RADT 111	Anatomy & Imaging
RADT 112	Cancer Cell Biology
RADT 113	Health & Human Behaviour
RADT 114	Healthcare Communication
RADT 115	Radiation Technology I
RADT 116	Radiation Therapy and Oncology I
RADT 117	Radiation Therapy Planning Concepts I

12. Anatomy and Imaging

Reference Number	RADT 111
Date:	February 2015
Duration:	150 contact hours and 225 hours of independent learning
Points:	30
Aim:	To gain a basic understanding of the gross and sectional anatomy of the human body and to be able to identify body structures on radiographic images
Recommended Entry Level:	Entry to the programme
Learning outcomes:	On the completion of this paper the successful student will be able to: <ol style="list-style-type: none">1. describe the anatomical organisation of the human body in terms of cells, tissues and organs for each of the principal organ systems;2. describe in detail the lymphatic drainage of structures affected by cancer;3. be able to relate surface anatomy to underlying body structures;4. use knowledge of gross body anatomy to identify body structures on X-rays, CT scans and MRI scans.

Content:

Corresponding to learning outcome 1

- (a) Cell types, tissue types, organs and function of:
- Integumentary system
 - Skeletal system
 - Muscular system
 - Cardiovascular system
 - Lymphatic system
 - Respiratory system
 - Digestive system
 - Urinary system
 - Reproductive systems
 - Endocrine system
 - Nervous system

Corresponding to learning outcome 2

- (a) Lymphatic drainage of structures in: head and neck, thorax, abdomen, pelvis and extremities

Corresponding to learning outcome 3

- (a) Body regions and planes
- (b) Boundaries and contents of body cavities
- (c) Clinical significance of surface land marks and planes of head, thorax, abdomen and extremities

Corresponding to learning outcome 4

- (a) Principles and diagnostic purpose of X-rays, CR scans, MRI scans;
- (b) Identification of structures on X-rays, CT scans and MRI scans.

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- Lectures
- Student centred tutorials
- The use of models, X-rays, CT scan and MRI scans

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one test = 15% of total mark
- one test = 15% of total mark
- one test = 15% of total mark
- one test = 15% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to sit the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final examination	40
TOTAL	100

Student result notices will carry grades from A to E

Webber, E.C., Vilensky, J.A. & Carmichael, S.W. (2009). *Netter's Concise Radiologic Anatomy.* Saunders, an imprint of Elsevier Inc.

13. Cancer Cell Biology

Reference Number	RADT 112
Date:	February 2015
Duration:	50 contact hours and 75 hours of independent learning
Points:	10
Aim:	To gain a basic understanding of cancer cell biology
Recommended entry level:	Entry to the programme
Learning outcomes:	On the completion of this paper the successful student will have a basic understanding of:

1. DNA synthesis and gene expression;
2. cell cycle and cell cycle progression;
3. mutagenesis and carcinogenesis;
4. radiobiology of normal tissues and tumours;
5. chemotherapy ;
6. immunotherapy.

Content:

Corresponding to learning outcome 1

- (a) Basic biochemistry, including structure of DNA and RNA
- (b) Genetic code
- (c) Molecular dogma (DNA synthesis, transcription, reverse transcription, translation)

Corresponding to learning outcome 2

- (a) Cell cycle, check points and progression

Corresponding to learning outcome 3

- (a) Mutagenesis (chemically, virally, radiation-induced)
- (b) Epigenetics (methylation, acetylation)
- (c) Carcinogenesis (tumour suppressor genes, proto-oncogenes, cell cycle progression, tumour staging)

Corresponding to learning outcome 4

- (a) Radiobiology of healthy tissues (pathology and kinetics, 4Rs)
- (b) Radiobiology of tumours

Corresponding to learning outcome 5

- (a) Principles of pharmacology
- (b) Chemotherapy that targets fast proliferating cells
- (c) Targeted Chemotherapy

(d) Hormone therapy

Corresponding to learning outcome 6

- (a) Basic immunology
- (b) Escaping immuno-surveillance
- (c) Antibody based therapies
- (d) Adoptive immune transfer and immune vaccines

Suggested learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- Lectures
- Student centred tutorials
- The use of videos, books and journals

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one test = 30% of total mark
- one test = 30% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination. A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final Examination	40
TOTAL	100

Student result notices will carry grades from A to E

14. Health and Human Behaviour

Reference Number:	RADT 113
Date :	February 2015
Duration :	45 contact hours and 67.5 hours of independent learning
Points :	9
Aim :	To introduce students to the psychological and sociological models of thinking about health, illness and coping with life-threatening illness and to apply this knowledge to the radiation therapy setting.

Recommended Entry Level: Entry to programme

Learning Outcomes: On completion of this paper the successful student will be able to:

1. demonstrate an understanding of the relationship between health, well-being and human behaviour;
2. identify social, political, economic and cultural determinants of health;
3. discuss stress and coping in relation to diagnosis of and treatment(s) for life-threatening illness, with special emphasis on cancer;
4. discuss risk and protective factors across the lifespan that affect coping with life-threatening illness;
5. discuss the relevance of culture to an individual's and group's experience of society with particular reference to health and illness;
6. describe the relevance of the Treaty of Waitangi to New Zealand society and the delivery of health care;
7. discuss decision-making in relation to diagnosis, side-effects and survivorship of cancer and its treatment(s);
8. identify research methodologies in health psychology and health sociology.

Content:

Corresponding to Learning Outcome 1

- (a) Definitions of health, well-being, illness and disease
- (b) Health beliefs and health behaviour
- (c) Theoretical perspectives of personality, learning and social learning, motivation and perception

Corresponding to Learning Outcome 2

- (a) Systems of inequality based on class, age, gender, race, ethnicity, disability, sexual orientation,
 - prejudice, stereotyping, discrimination and stigma
- (b) Inequalities in New Zealand society

- (c) The consequences of inequalities in access to resources, including health for the individual, family and society, with an emphasis on cancer

Corresponding to Learning Outcome 3

- (a) Causes and effects of stress on individuals
(b) Stress and the immune system
(c) Reactions to illness: interactions between physical, mental, emotional and social phenomena
(d) Coping strategies in relation to stress and illness

Corresponding to Learning Outcome 4

- (a) Psychosocial modifiers of stress and coping across the lifespan
(b) Contextual influences on risk and protective factors that affect coping
(c) Human development and health

Corresponding to Learning Outcome 5

- (a) The meaning and relevance of culture to individual and group self-perception, beliefs and practices
(b) The relevance of culture to New Zealand society
(c) Culture, health, illness, and health care delivery in the radiation therapy setting
(d) Cultural safety in health care delivery

Corresponding to Learning Outcome 6

- (a) The Treaty of Waitangi and its significance to Maori and Pakeha
(b) The relevance and application of the Treaty of Waitangi to health, illness and health care delivery

Corresponding to Learning Outcome 7

- (a) Cognition and health beliefs
(b) Clinical decision making
(c) Adherence to treatment, management of side-effects, survivorship/ living with life-threatening illness

Corresponding to Learning Outcome 8

- (a) Quantitative research methodology in health psychology and sociology
(b) Qualitative research methodology in health psychology and sociology

Suggested Learning and Teaching Approaches :

The learning outcomes of this paper could be achieved by the following :

- student centred tutorials with an emphasis on class discussion and debate;
- the use of research-based evidence;
- guest speakers who are able to offer current and practical information on topics;
- case studies and problem based learning;
- seminar and project presentations;

- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, exploration and debate;
- use of a variety of small scale investigative techniques.

Assessment of Learning Outcomes:

Summative assessment will consist of the following:

- one assignment = 25% of total mark
- one assignment = 35% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to sit the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final examination	40
TOTAL	100

Student result notices will carry grades from A to E

15. Healthcare Communication

Reference Number:	RADT 114
Date:	July 2015
Duration:	40 contact hours and 72.5 hours of independent learning
Points:	9
Aim:	To introduce students to the foundations of healthcare communication skills and strategies and apply these to the radiation therapy setting.
Learning Outcomes:	On completion of this paper the successful student will be able to: <ol style="list-style-type: none">1. describe core qualities and skills involved in establishing a healthcare professional-patient relationship in the radiation therapy setting;2. demonstrate an understanding of core verbal and non-verbal communication skills in a range of contexts;3. analyse different social, professional and personal value bases in the provision of healthcare;4. identify the principles of culturally safe healthcare practice in the radiation therapy setting.

Content:

Corresponding to Learning Outcome 1

- (a) Core qualities, attitudes and skills of a healthcare professional
Social and emotional intelligence
 - Empathy
 - Rapport
 - Respect
- (b) Professional relationships in the health care setting: patients, their families and colleagues
 - Ethical practice
 - Trust
 - Control
 - Self-disclosure
 - Self-care and self-reflection

Corresponding to Learning Outcome 2

- (a) Core verbal and nonverbal communication skills in health care relationships
 - multidimensional approach to listening
 - communication microskills: verbal and nonverbal
 - affirm, motivate, and educate others
- (b) Cross cultural communication

- (c) Communication contexts
 - environmental
 - social and political
 - ethical
- (d) Interviewing skills
- (e) Communication within healthcare teams
- (f) Speaking to a group

Corresponding to Learning Outcome 3

- (a) Personal values and moral development
- (b) Professional values in health care
- (c) Social values in health care

Corresponding to Learning Outcome 4

- (a) Cultural diversity, cultural safety and cultural competence
- (b) Social and personal attitudes towards diversity and equality
 - prejudice, stereotyping, discrimination and stigma
- (c) Professional culturally safe practice in New Zealand

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following :

- student centred tutorials with an emphasis on class discussion and debate;
- guest speakers who are able to offer current and practical information on topics;
- case studies and problem based learning;
- simulated clinical scenarios with the lecturer, actors and others modelling and coaching appropriate behaviours;
- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, exploration and debate;
- use of a variety of small scale investigative techniques;
- the teaching material should draw on the student's personal and professional experiences and encourage critical inquiry and examination of the "taken for granted world".

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one assignment = 50% of total mark
- one group presentation = 50% of total mark

Formative assessment will consist of participation in a communication skills workshop and submission of a written self-reflection assignment in order to meet coursework terms.

A pass will be awarded to all students who gain 50% overall in the summative assessment and participate in the communication skills workshop.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E.

16. Radiation Technology I

Reference Number:	RADT 115
Date:	February 2015
Duration:	90 contact hours and 135 hours of independent learning
Points:	18
Aim:	To introduce students to the basic principles of radiation physics, the application to radiation technology and the use of radiation therapy equipment.
Recommended Entry Level:	Entry to the programme
Learning Outcomes :	On completion of this paper the successful student will be able to: <ol style="list-style-type: none">1. demonstrate an understanding of general physical principles in relation to radiation therapy;2. discuss the basic physics of X and gamma radiation;3. describe the principles of radiation protection and safety;4. describe the principles of construction and operation of radiation therapy and imaging equipment;5. describe the principles of diagnostic imaging technologies;6. demonstrate an understanding of the use of computers and their applications.

Content:

Corresponding to Learning Outcome 1

- (a) Measurement – units, uncertainties
- (b) Systematic and random errors
- (c) Properties of electromagnetic radiation
- (d) Light sources (point sources, extended sources, lasers)
- (e) Electric charge, fields, potential
- (f) DC circuits and electrical measurements
- (g) Alternating current and rectification

Corresponding to Learning Outcome 2

- (a) Ionizing radiation, exposure, dose
- (b) Production of X-rays

- (c) Radioactive decay and the production of gamma rays
- (d) Interaction of radiation with matter, absorption processes
- (e) Measurement of radiation

Corresponding to Learning Outcome 3

- (a) Radiation protection principles
- (b) Radiation safety legislation
- (c) Personnel monitoring

Corresponding to Learning Outcome 4

- (a) Kilovoltage X-ray units, power supplies and x-ray tubes
- (b) Megavoltage X-ray units, linear accelerator technology

Corresponding to Learning Outcome 5

- (a) Radiographic imaging, contrast agents, film, fluoroscopy
- (b) Digital imaging, digital detectors, digital image processing
- (c) CT
- (d) MRI
- (e) PET
- (f) Ultrasound
- (g) Nuclear medicine imaging

Corresponding to Learning Outcome 6

- (a) Computer hardware and operation
- (b) Software applications (word processing, spreadsheets, PowerPoint)

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- lectures
- student centred tutorials
- laboratory demonstrations and practical sessions

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one test = 20% of total mark
- one test = 20% of total mark
- one test = 20% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination.

A pass will be awarded to all students who gain a minimum of 50% in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final examination	40
TOTAL	100

Student result notices will carry grades from A to E

17. Radiation Therapy and Oncology I

Reference Number:	RADT 116
Date:	February 2015
Duration:	150 hours contact and 225 hours independent learning
Points:	30
Aim:	To enable students to gain a basic understanding of oncology, and the treatment modalities available to treat malignant disease.
Recommended Entry Level:	Entry to programme
Learning Outcomes:	On completion of this paper the successful student will be able to describe and discuss in some detail:

1. legal and ethical issues related to radiation therapy and patient care;
2. pathology of common tumours and the ways in which they are classified;
3. treatment modalities used to treat benign and malignant disease;
4. radiation therapy techniques used in the treatment of disease;
5. care a patient may require when receiving radiation therapy;
6. chemotherapy for patients with malignant disease;
7. pharmacological approach to patient care during radiation therapy;
8. commonly used mould room techniques;
9. clinical trials.

Content:

Corresponding to Learning Outcome 1

- (a) Code of Ethics
- (b) Ethical issues and privacy
- (c) Relevant legislation
- (d) Informed consent
- (e) Professional organizations/Registration Boards
- (f) Introduction to the health system
- (g) Use of clinical information

Corresponding to Learning Outcome 2

- (a) Malignant tumours
- (b) Benign tumours treated with radiation therapy
- (c) Epidemiology
- (d) Aetiology
- (e) Classification systems

Corresponding to Learning Outcome 3

- (a) Surgery
- (b) Radiation therapy
- (c) Chemotherapy (including hormone therapy)
- (d) Other treatment modalities
- (e) Principles underlying the choice of treatment

Corresponding to Learning Outcome 4

- (a) Radical intent
- (b) Palliative intent
- (c) Pre and post-operative techniques
- (d) Adjuvant techniques

Corresponding to Learning Outcome 5

- (a) Local reactions to radiation therapy
- (b) Systemic reactions to radiation therapy
- (c) Blood counts
- (d) Diet and fluid intake
- (e) Patient information
- (f) Manual handling
- (g) Infection control
- (h) Specific patient needs, ie. catheter/colostomy, bedpan

Corresponding to Learning Outcome 6

- (a) Principles of chemotherapy for cancer
- (b) Side effects of chemotherapy

Corresponding to Learning Outcome 7

- (a) Pharmacological principles
- (b) Adverse reactions to drugs
- (c) Medications used for radiation therapy reactions
- (d) Management of side effects including chemotherapy

Corresponding to Learning Outcome 8

- (a) Immobilisation devices
- (b) Electron cut outs
- (c) Shielding
- (d) Bolus

Corresponding to Learning Outcome 9

- (a) Phase I, II, III, IV clinical trials
- (b) Clinical trial groups in radiation therapy (e.g. TROG)
- (c) Publications

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- student centred tutorials with an emphasis on class discussion and debate;
- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, and exploration;
- three one week visits to a radiation therapy department

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one test = 20% of total mark
- one test = 20% of total mark
- one assignment = 20% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework and the clinical assignment must be successfully completed to be eligible to take the final examination.

A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final examination	40
TOTAL	100

Student result notices will carry grades from A to E

Required textbooks

Washington, C.M. & Leaver, D.T. (2010). *Principles and Practice of Radiation Therapy*. (3rd Edition). Mosby, St Louis, Missouri.

Resources

International Commission on Radiation Units and Measurements: (1999) Prescribing, Recording, and Reporting Photon Beam Therapy. Supplement to ICRU 50 (*ICRU Report 62*).

Moller, T.B. & Reif, E. (2006). *Pocket Atlas of Sectional Anatomy, CT and MRI, Vol 1 & Vol 2*. (3rd Edition). Thieme, New York.

18. Radiation Therapy Planning Concepts I

Reference Number:	RADT 117
Date:	July 2015
Duration:	70 hours contact and 105 hours independent learning
Points:	14
Aim:	To enable students to gain a basic understanding of planning the treatment of malignant disease
Recommended Entry Level:	Entry to programme
Learning Outcomes:	On completion of this paper the successful student will be able to demonstrate: <ol style="list-style-type: none">1. knowledge of basic calculations used in radiation therapy;2. an understanding of manual planning principles;3. knowledge and performance of basic principles and concepts of computer planning.

Content:

Corresponding to Learning Outcome 1

- (a) Calibration conditions
- (b) Inverse square law
- (c) Attenuation factors for SSD and SAD techniques
- (d) Manual calculations of basic radiation therapy SSD and SAD treatment techniques

Corresponding to Learning Outcome 2

- (a) Isodose distributions
- (b) ICRU 50/62
- (c) Normalisation
- (d) Weighting
- (e) Beam energy, d-max, exit dose and arrangement
- (f) Organs at risk

Corresponding to Learning Outcome 3

- (a) Isodose distributions
- (b) Computer planning principles
- (c) ICRU 50/62
- (d) Normalisation
- (e) Weighting

- (f) Beam energy, d-max, exit dose and arrangement
- (g) Inhomogeneities
- (h) Wedges
- (i) Monitor Units
- (j) Field verification
- (k) Organs at risk

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- practical laboratory tutorials for computer planning
- student centred tutorials with an emphasis on class discussion and debate
- the use of media such as videos, journals, and texts, will provide a rich source of material for discussion, and exploration;

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one test = 30% of total mark
- one assignment = 30% of total mark
- one viva = 30% of total mark
- one portfolio = 10% of total mark

A pass will be awarded to all students who gain 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E

STAGE TWO PAPERS

RADT 211	Radiation Therapy Practice II
RADT 212	Principles of Research
RADT 213	Advanced Healthcare Communication
RADT 214	Radiation Technology II
RADT 215	Radiation Therapy and Oncology II
RADT 216	Radiation Therapy Planning Concepts II

19. Radiation Therapy Practice II

Reference Number:	RADT 211
Date:	February 2015
Duration:	640 hours contact and 110 hours independent learning.
Points:	60
Aim:	Consolidation of academic learning in Stage I: the student will gain knowledge and acquire skill to undertake the routine tasks of a radiation therapist, under supervision.
Recommended Entry Level:	Successful completion of all Stage I papers.
Learning Outcomes:	On completion of this paper the successful student will be able to across three work areas: CT, planning and treatment;

1. demonstrate knowledge and efficient practice;
2. recognise patient needs and/or significant changes in patients' condition;
3. demonstrate appropriate verbal and nonverbal communication skills;
4. demonstrate the ability to work in a healthcare team;
5. demonstrate appropriate self-management techniques;
6. demonstrate safe practices in the workplace;
7. demonstrate the ability to identify problems in the clinical setting;
8. develop an increasing awareness of quality assurance;
9. demonstrate reflective practice.

Content:

Corresponding to Learning Outcome 1

- (a) Description of routine radiation therapy practice
- (b) Rationale for routine radiation therapy practice
- (c) Comprehend the practical application of theory and technical skills
- (d) Understand workflow
- (e) Patient safety and comfort

Corresponding to Learning Outcome 2

- (a) Physical, social and emotional needs of patients
- (b) Treatment reactions and management, including medication
- (c) Expected response to treatment
- (d) Indicators for reassessing patient condition
- (e) Appropriate referral

Corresponding to Learning Outcome 3

- (a) Written records and reports
- (b) Verbal reporting
- (c) Verification of information
- (d) Patient communication
- (e) Staff communication
- (f) Listening skills
- (g) Establishing rapport

Corresponding to Learning Outcome 4

- (a) Roles of multi-disciplinary team members
- (b) Channels of communication
- (c) Sources of conflict and dealing with conflict

Corresponding to Learning Outcome 5

- (a) Emotional responses RTs may have when working with patients and colleagues
- (b) Appropriate coping strategies
- (c) Time management
- (d) Initiative/responsibility

Corresponding to Learning Outcome 6

- (a) Potential hazards and risks
- (b) Safety regulations, procedures and protocols
- (c) Equipment faults

Corresponding to Learning Outcome 7

- (a) Identification of problems in the clinical setting

Corresponding to Learning Outcome 8

- (a) Quality management systems
- (b) Clinical quality assurance procedures

Corresponding to Learning Outcome 9

- (a) Observe, participate in, question and evaluate practice

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- clinical practice in Department A;
- tutorials with an emphasis on group discussion;
- seminar, case study, project presentations, journal club, study days and conferences;
- accessing media: journals, texts, newspaper articles and television provide a rich source of material for discussion, exploration;
- utilising a variety of small scale investigative techniques, participation in audit and research culminating in evidence based practice.

Assessment of Learning Outcomes

Summative assessment will consist of all outcomes within each of the three work areas:

- rotational assessment (CT) = Pass/Fail

- rotational assessment (planning) = Pass/Fail
- rotational assessment (treatment) = Pass/Fail

And

- one clinical journal = Pass/Fail

A pass will be awarded to all students who gain a pass in each component.

Students will need to gain 640 clinical hours for the semester in which they have enrolled.

Reassessment:

- Reassessment can occur in two work areas for each enrolment of the paper.
- If a student fails all three work areas they are not eligible for reassessment and fail the paper overall.
- Reassessment can occur for the clinical journal.

Reporting Results to Students

Results will be reported to students as Pass/Fail

Students will normally be required to retake all assessment components in a repeat enrolment.

20. Principles of Research

Reference Number:	RADT 212
Date:	July 2015
Duration:	25 contact hours and 50 hours of independent learning
Points:	6
Aim:	Student will have a basic understanding of different research methodologies that underpin quantitative and qualitative research.
Recommended Entry Level:	Successful completion of all Stage I papers.
Learning Outcomes:	On completion of this paper the successful student will be able to: <ol style="list-style-type: none">1. describe the difference between quantitative or qualitative research;2. demonstrate a basic understanding of different study designs;3. demonstrate a basic understanding of the process involved in obtaining ethical approval for research involving human subjects;4. produce a critical analysis of one qualitative and one quantitative research paper.

Content:

Corresponding to Learning Outcome 1

- (a) Quantitative versus qualitative research
- (b) Literature reviews versus primary research

Corresponding to Learning Outcome 2

- (a) Study designs of quantitative methodologies: cell based studies, animal studies, clinical trials, questionnaire-based studies
- (b) Study designs of qualitative methodologies: questionnaire-based studies: quality of life, focus groups, interviews, ethnographic research, observational research, action based research, critical theory research
- (c) Limitations inherent to different study designs: confounding factors, interpretation of scope of results
- (d) Statistical analyses appropriate for different study designs

Corresponding to Learning Outcome 3

- (a) Research ethics
- (b) Participant information sheets and informed consent
- (c) Maori Consultation
- (d) Locality assessment approval

Corresponding to Learning Outcome 4

- (a) Description and analysis of one qualitative and one quantitative research paper

Suggested Learning and Teaching Approaches

The learning outcomes of this paper should be achieved by the following:

- Lectures to introduce research concepts and that invite student participation and debate;
- Student centred tutorials with an emphasis on class discussion and debate;
- Workshops by guest speakers who will contribute to the overall research experience from their own unique research background.

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one assignment (quantitative) = 50% of total mark
- one assignment (qualitative) = 50% of total mark

A pass will be awarded to all students who gain 50% overall.

Reporting Results to Students

Results will be reported to students as:

Coursework out of 100

Student result notices will carry grades from A to E

Resources

Polgar, S., & Thomas, S. (2008). *Introduction to Research in the Health Sciences*. (5th Edition). Churchill Livingstone.

21. Advanced Healthcare Communication

Reference Number:	RADT 213
Date:	July 2015
Duration:	50 contact hours and 75 hours of independent learning
Points:	10
Aim:	To enable the student to develop effective interpersonal skills when working with patients in pain (curative and palliative) and/or terminally ill.
Recommended Entry Level:	Successful completion of RADT 113: Health and Human Behaviour and RADT 114: Healthcare Communication.
Learning Outcomes:	On completion of this paper the successful student will be able to:

1. describe factors that may influence an individual's perception of pain, including cancer-related pain (curative and palliative), and relate these to the role of the radiation therapist;
2. identify non-pharmacological methods of pain management and relate these to the role of the radiation therapist;
3. discuss the psychosocial impact of terminal illness on an individual and their family;
4. identify appropriate responses to individuals and their family who are coping with terminal illness;
5. discuss appropriate personal management strategies to lessen the impact on self of working with patients who are in pain and/or terminally ill;
6. discuss the impact of delivering palliative treatment on teams.

Content:

Corresponding to Learning Outcome 1

- (a) Causes and classifications of pain
- (b) Basic physiology of pain perception
- (c) Factors that modify pain perception - cultural, social, psychological and physical
- (d) Basic pain assessment in the radiation therapy setting

Corresponding to Learning Outcome 2

- (a) Strategies to assist patients cope with pain
 - Physical therapies
 - Psychological and psychosocial methods of pain management

Corresponding to Learning Outcome 3

- (a) Attitudes towards death and dying in self and others
- (b) Psychosocial consequences of terminal illness for the individual and family
- (c) Cross cultural differences in coping with hospitalisation, illness and terminal illness
- (d) Models of grieving, including contextual influences on grief
- (e) Basic grief assessment and intervention

Corresponding to Learning Outcome 4

- (a) Effective communication skills when working with patients, in pain and/or grieving, and their family in the radiation therapy setting
- (b) Counselling as a helping tool
- (c) Cultural competence in palliative context
- (d) Identification of support systems for patient receiving radiation therapy, in pain and/or with palliative intent, and their family

Corresponding to Learning Outcome 5

- (a) Identification of grief responses in self
- (b) Management of self when working with palliative intent
- (c) Strategies to minimise effects on self when working in a palliative context

Corresponding to Learning Outcome 6

- (a) Impact of delivering palliative treatment on teams
- (b) Strategies to promote effective collaboration and participation within teams when treating patients with palliative intent

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- student centred tutorials with an emphasis on class discussion and debate;
- guest speakers who are able to offer current and practical information on topics;
- case studies and problem based learning;
- simulated clinical scenarios with the lecturer, actors and others modelling and coaching appropriate behaviours;
- seminar and project presentations;
- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, exploration and debate;
- use of a variety of small scale investigative techniques;
- the teaching material should draw on the student's personal and professional experiences and encourage critical inquiry and examination of the "taken for granted world".

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one case study = 40% of total mark
- one assignment = 30% of total mark
- one assignment = 30% of total mark

Formative assessment will consist of participation in a communication skills workshop and submission of a written self-reflection assignment in order to meet coursework terms.

A pass will be awarded to all students who gain 50% overall in the summative assessment and participate in the communication skills workshop.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E

22. Radiation Technology II

Reference Number:	RADT 214
Date:	July 2015
Points:	16
Duration:	100 contact hours and 100 hours of independent learning
Aim:	To enable students to apply their understanding of computers, radiation therapy equipment and imaging to the planning and delivery of radiation therapy.
Recommended Entry Level:	Successful completion of RADT 115: Radiation Technology I.
Learning Outcomes:	On completion of this paper the successful student will be able to:

1. describe the role of the different types of radiation for use in radiation therapy;
2. describe the process for machine calibration and quality control;
3. describe radiation detection and measurement;
4. discuss quality assurance systems in radiation therapy;
5. discuss treatment and imaging technology in radiation therapy;
6. discuss the use of radioactive materials in radiation therapy.

Content:

Corresponding to Learning Outcome 1

- (a) Photons – absorption processes
- (b) Electrons – absorption in tissue, depth doses, isodoses
- (c) Other particles, principally protons

Corresponding to Learning Outcome 2

- (a) Radiation detectors and calibration
- (b) Machine calibration

Corresponding to Learning Outcome 3

- (a) Radiation detectors for use in phantoms and on patients
- (b) Radiation measurement

Corresponding to Learning Outcome 4

- (a) Principles of quality assurance
- (b) Systems of quality assurance
- (c) Rationale for quality assurance

Corresponding to Learning Outcome 5

- (a) Imaging techniques: CBCT, OBI, CT, PET
- (b) IMRT and tomography
- (c) IGRT and Adaptive RT
- (d) Stereotactic techniques

Corresponding to Learning Outcome 6

- (a) Distinguish between sealed and unsealed sources
- (b) Brachytherapy loading techniques and delivery systems
- (c) Unsealed therapy procedures
- (d) Safety and quality assurance

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- lectures
- student centred tutorials
- laboratory demonstrations and practical sessions

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one assignment = 20% of total mark
- one test = 20% of total mark
- one test = 20% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination. A pass will be awarded to all students who gain a minimum of 50% in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final examination	40
TOTAL	100

Student result notices will carry grades from A to E

Resources

23. Radiation Therapy and Oncology II

Reference Number:	RADT 215
Date:	July 2015
Duration:	60 contact and 65 hours of independent learning
Points:	10
Aim:	To enable the student to integrate their knowledge of oncology and treatment modalities to determine optimal treatment for malignant disease.
Recommended Entry Level:	Successful completion of RADT 116: Radiation Therapy and Oncology I.
Learning Outcomes:	On completion of this paper the successful student will be able to: <ol style="list-style-type: none">1. discuss the oncology of and the clinical rationale for selecting appropriate treatment for the stated 'Site List' (tumours that are commonly treated clinically);2. discuss the implications of the Cartwright Inquiry.

Content:

Corresponding to Learning Outcome 1

Site List

- skin (SCC, BCC, melanoma)
 - urogenital (bladder, testes, prostate)
 - gynaecological (cervix, endometrium, ovary)
 - gastrointestinal (oesophagus & rectum)
 - head & neck (pituitary & larynx)
- (a) Patient assessment methods
 - (b) Tumour pathology and characteristics
 - (c) Combined modality treatments with a focus on radiation therapy techniques (including palliation)
 - (d) Typical treatment reactions

Corresponding to Learning Outcome 2

- (a) Ethical issues highlighted by the Cartwright Report
- (b) Recommended investigations for cervical cancer
- (c) Significance of the Cartwright Inquiry

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- student centred tutorials with an emphasis on class discussion and debate;
- seminar and project presentations;
- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, and exploration.

Assessment of Learning Outcomes

Summative assessment will consist of the following :

- one group presentation = 30% of total mark
- one test = 30% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination. A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of	60
Final examination out of	40
TOTAL	100

Student result notices will carry grades from A to E

24. Radiation Therapy Planning Concepts II

Reference Number:	RADT 216
Date:	July 2015
Duration:	100 Contact and 125 hours of independent learning
Points:	18
Aim:	To enable students to understand the concepts of radiation therapy treatment planning to enable the planning of standard techniques
Recommended Entry Level:	Successful completion of RADT 116: Radiation Therapy & Oncology I and RADT 117: Radiation Therapy Planning Concepts I.
Learning Outcomes:	On completion of this paper the successful student will be able to:

1. demonstrate knowledge and application of calculations used in radiation therapy;
2. demonstrate knowledge, application of principles and concepts of computer planning for critiquing standard techniques;
3. demonstrate an understanding of imaging and anatomy, relevant to computer planning;
4. discuss the effects of radiation on biological systems.

Content:

Corresponding to Learning Outcome 1

- (a) Calibration conditions
- (b) Inverse square law
- (c) Attenuation factors for SSD and SAD techniques
- (d) Manual calculations of radiation therapy SSD and SAD treatment techniques including shielding and extended SSD
- (e) Justification of factors used and resulting MU

Corresponding to Learning Outcome 2

- (a) Consolidate knowledge of computer planning principles by producing a range of standard radiation therapy plans. Principles to include:
 - isodose distributions
 - ICRU 50/62
 - normalisation
 - weighting
 - beam energy, d-max, exit dose and arrangement
 - inhomogeneities
 - wedges

- monitor units
- field verification
- organs at risk
- contouring methods
- volume transfer

- (b) Apply computer planning principles by students critiquing the plans produced

Corresponding to Learning Outcome 3

- (a) Applied anatomy and imaging
- (b) Diagnostic imaging e.g. CT, SPECT, PET, MRI
- (c) Image fusion

Corresponding to Learning Outcome 4

- (a) Radiation chemistry
- (b) Mammalian cell sensitivity
- (c) Physical modification of radiation exposure
- (d) Acute radiation syndrome
- (e) Late effects of radiation

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- practical laboratory tutorials for computer planning;
- student centred tutorials with an emphasis on class discussion and debate;
- the use of media such as videos, journals, and texts, will provide a rich source of material for discussion, and exploration.

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- | | | |
|----------------------------|---|-----|
| • one assignment | = | 20% |
| • one test (radiobiology) | = | 20% |
| • one VIVA (60% pass mark) | = | 40% |
| • one portfolio | = | 20% |

One reassessment can occur if the pass mark of 60% is not achieved in the viva. A pass will be awarded to all students who gain 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E

STAGE THREE PAPERS

RADT 311	Radiation Therapy Practice III
RADT 312	Literature Analysis
RADT 313	Professional Development
RADT 314	Radiation Therapy and Oncology III
RADT 315:	Radiation Therapy Planning Concepts III

25. Radiation Therapy Practice III

Reference Number:	RADT 311
Date:	July 2015
Duration:	640 contact hours and 110 hours of independent learning.
Points:	60
Aim:	To enable the student to demonstrate the ability to effectively carry out the duties of a radiation therapist, taking responsibility for his/her actions, under the supervision of a qualified radiation therapist.
Recommended Entry Level:	Successful completion of RADT 312, 313, 314 and 315.
Learning Outcomes:	On completion of this paper the successful student will be able to across three domains: CT, planning and treatment; <ol style="list-style-type: none">1. demonstrate consistent and safe practice2. demonstrate understanding of quality assurance procedures;3. demonstrate the ability to identify error and problem solving skills;4. demonstrate consistent and optimal patient care: assessment, advice and managing patient needs;5. demonstrate well developed communication skills;6. demonstrate reflective practice and utilise coping strategies in the context of illness, grief, death and dying.

Content:

Corresponding to Learning Outcome 1

- (a) Description and rationale of routine radiation therapy practice
- (b) Demonstrate consistent routine radiation therapy practice (including technical competence)

Corresponding to Learning Outcome 2

- (a) Demonstrate safe practice
- (b) Demonstrate quality assurance practices in the clinical setting

Corresponding to Learning Outcome 3

- (a) Identification of problems/error in clinical setting
- (b) Demonstrate problem solving techniques in clinical setting
- (c) Evaluation of problem solving outcomes

Corresponding to Learning Outcome 4

- (a) Recognise patient needs and/or significant change in patient condition
- (b) Assess, advise and manage patient needs
- (c) Communicate information accurately and effectively

Corresponding to Learning Outcome 5

- (a) Written records and reports
- (b) Verification of information
- (c) Verbal and non-verbal communication skills
- (d) Works professionally with appropriate demeanour
- (e) Teamwork, including multidisciplinary healthcare team

Corresponding to Learning Outcome 6

- (a) High level of self awareness
- (b) Ability to recognise critical incidents
- (c) Effective coping strategies

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- clinical practice in Department B;
- tutorials with an emphasis on group discussion;
- seminar, case study project presentations, journal club, study days and conferences;
- accessing media: journals, texts, newspaper articles and television provide a rich source of material or discussion, exploration;
- utilisation of a variety of small scale investigative techniques, involvement in audit and research culminating in evidence based practice

Assessment of Learning Outcomes

Summative assessment will consist of all outcomes within each work area:

- | | | |
|--------------------------|---|-----------|
| • assessment (CT) | = | Pass/Fail |
| • assessment (planning) | = | Pass/Fail |
| • assessment (treatment) | = | Pass/Fail |

A pass will be awarded to all students who gain a pass in each work area.

Reassessment:

- Reassessment can occur in two work areas for each enrolment of the paper.
- If a student fails all three work areas they are not eligible for reassessment and fail the paper overall.

Reporting Results to Students

Results will be reported to students as Pass/Fail

Students will normally be required to retake all assessment components in a repeat enrolment

Resources

- Bomford, C., & Kunkler, I. (2003). *Walter & Miller's Textbook of Radiotherapy*. (6th Edition) Churchill Livingstone.

26. Literature Analysis

Reference Number:	RADT 312
Date:	February 2015
Duration:	50 contact hours and 200 hours of independent learning
Points:	20
Aim:	For students to critically analyse and report on two sets of journal articles (quantitative and qualitative methodologies) within the radiation therapy setting.
Recommended Entry Level:	Satisfactory completion of RADT 212: Principles of Research
Learning Outcomes:	On completion of this paper the successful student will be able to;
	<ol style="list-style-type: none">1. competently analyse and report on four (4) primary research papers that use quantitative methodologies2. competently analyse and report on four (4) primary research papers that use qualitative methodologies3. present the outcomes of either qualitative or quantitative studies in a poster discussion

Content:

Corresponding to Learning Outcome 1

- (a) Critical analysis of three papers that explore a chosen area of quantitative research
- (b) Understanding of research design, including ethical considerations

Corresponding to Learning Outcome 2

- (a) Critical analysis of three papers that explore a chosen area of qualitative research
- (b) Understanding of research design, including ethical considerations

Corresponding to Learning Outcome 3

- (a) Presentation of the outcomes of one of the studies in the form of a poster discussion.

Suggested learning and Teaching Approaches

Student centred tutorials

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- quantitative assignment 40%
- qualitative assignment 40%
- poster discussion 20%

A pass will be awarded to all students who gain 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E

Resources

Davidson, C. & Tolich, M. (2007). *Social Science Research in New Zealand*. Pearson, Prentice Hall, Australia.

Peat, J. (2001). *Health Science Research. A handbook of quantitative methods*. Allen & Unwin, NSW, Australia.

Polgar, S., & Thomas, S. (2008). *Introduction to Research in the Health Sciences*. (5th Edition).

27. Professional Development

Reference Number:	RADT 313
Date:	February 2015
Duration:	50 contact and 75 hours of independent learning
Points:	10
Aim:	For students to develop their own knowledge and skills and to demonstrate personal, people and organisational development.
Recommended Entry Level:	Successful completion of RADT 213: Advanced Healthcare Communication
Learning Outcomes:	On completion of this paper the successful student will be able to:

1. determine a personally and professionally acceptable vision of the role of a radiation therapist and be able to integrate this professional role into other life roles.
2. identify own role and responsibilities within radiation therapy teams.
3. identify conflict resolution strategies appropriate to the radiation therapy context.
4. describe appropriate strategies to minimise the development of burnout in the workplace.
5. demonstrate the skills of reflective practice as part of ongoing professional development.
6. consider issues relevant to future career planning.
7. identify own learning needs and how to fulfil these needs.
8. identify the structure and functions of the health care system in New Zealand and the role of radiation therapy within the health care system.

Content:

Corresponding to Learning Outcome 1

- (a) Professional socialisation
- (b) Radiation therapists as members of a profession - roles and responsibilities
- (c) Professional values and ethical practice
- (d) Social media and professionalism
- (e) Problem solving within a moral/ethical and medico-legal framework
- (f) Moral dimensions of the role of the radiation therapist
- (g) Social media and professional practice

Corresponding to Learning Outcome 2

- (a) Structure of radiation therapy teams
- (b) Team dynamics
- (c) Communication and teamwork
- (d) Working in multi-disciplinary teams
- (e) Interprofessionalism

Corresponding to Learning Outcome 3

- (a) Common sources of conflict in healthcare
- (b) Strategies for dealing with conflict
- (c) Personal management strategies

Corresponding to Learning Outcome 4

- (a) Origins and types of stressors
- (b) Consequences of stress: cognitive, emotional, physical, behavioural
- (c) Positive and negative coping mechanisms
- (d) Strategies to prevent or minimise the effects of stress
- (e) Causes and consequences of burnout in a health care setting
- (f) Strategies for dealing with burnout

Corresponding to Learning Outcome 5

- (a) Reflective practice and novice practitioners
- (b) Processes of critical reflective practice
- (c) Supervision, peer mentoring, other supports and debriefing

Corresponding to Learning Outcome 6

- (a) Issues relevant to future professional development and career planning
- (b) CV's, letters of application
- (c) Interview skills

Corresponding to Learning Outcome 7

- (a) Maintenance of professional standards
- (b) Lifelong learning and continuing professional development

Corresponding to Learning Outcome 8

- (a) Structure of the New Zealand health care system, historical and current
- (b) Cancer Control Strategy and the role of radiation therapy in the New Zealand health care system
- (c) Medico-legal dimensions of the role of the radiation therapist and moral agency (to include HDC and HPCA)
- (d) Codes of ethics and the radiation therapist
- (e) New Zealand Institute of Medical Radiation Technology
- (f) Medical Radiation Technologists Board

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following :

- student centred tutorials with an emphasis on class discussion and debate;
- seminar and project presentations;
- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, and exploration;
- use of current research in scholarly journals
- simulated clinical scenarios with the lecturer, actors and others modelling and coaching appropriate behaviours.

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one assignment (professional issues) = 50% of total mark
- one assignment (continuing professional development) = 50% of total mark

Formative assessment will consist of participation in a communication skills workshop and submission of written self-reflection assignment in order to meet coursework terms.

A pass will be awarded to all students who gain 50% overall in the summative assessment and participate in the communication skills workshop.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E

28. Radiation Therapy and Oncology III

Reference Number:	RADT 314
Date:	February 2015
Duration:	75 Contact and 75 independent learning hours
Points:	12
Aim:	To enable the student to integrate their knowledge of oncology and treatment modalities to determine optimal treatment for malignant disease and to understand the implications of resource management.
Recommended Entry Level:	Successful completion of RADT 215: Radiation Therapy and Oncology II.
Learning Outcomes:	On completion of this paper the successful student will be able to: <ol style="list-style-type: none">1. discuss the oncology of and the clinical rationale for selecting appropriate treatment for the stated 'Site List' (tumours that are commonly treated clinically);2. analyse the resource implications of managing an oncology department.

Content:

Corresponding to Learning Outcome 1

Site List

- breast
 - lung
 - head & neck (oral cavity, pharynx, parotid)
 - CNS (astrocytoma/medulloblastoma)
 - lymphoma (Hodgkins and non-Hodgkins lymphomas)
 - sarcomas
 - paediatrics
- (a) Patient assessment methods
 - (b) Tumour pathology and characteristics
 - (c) Combined modality treatments with a focus on radiation therapy techniques (including palliation)
 - (d) Typical treatment reactions and the appropriate management of these

Corresponding to Learning Outcome 2

- (a) Human resource management
- (b) Financial resource management
- (c) Time management
- (d) Equipment/plant/stock/management
- (e) Use of statistics in management

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- student centred tutorials with an emphasis on class discussion and debate;
- seminar and project presentations;
- the use of media such as videos, journals, texts, newspaper articles and television will provide a rich source of material for discussion, and exploration.

Assessment of Learning Outcomes

Summative assessment will consist of the following :

- one test = 30% of total mark
- one assignment = 30% of total mark
- one final 2 hour written examination = 40% of total mark

50% must be gained in the coursework to be eligible to take the final examination. A pass will be awarded to all students who gain 50% minimum in the examination and 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework	60
Final examination	40
TOTAL	100

Student result notices will carry grades from A to E

29. Radiation Therapy Planning Concepts III

Reference Number:	RADT 315
Date:	February 2015
Duration:	100 Contact and 125 independent learning hours
Points:	18
Aim:	To enable students to understand the concepts of radiation therapy treatment planning to plan a range of techniques
Recommended Entry Level:	Successful completion of RADT 215: Radiation Therapy and Oncology II and RADT 216: Radiation Therapy Planning Concepts I.
Learning Outcomes:	On completion of this paper the successful student will be able to demonstrate: <ol style="list-style-type: none">1. knowledge and application of calculations used in radiation therapy;2. knowledge and performance of principles and concepts of computer planning, and the ability to critically analyse standard radiation therapy technique computer plans3. consolidation of imaging and anatomy relevant to radiation therapy4. application of radiobiology to the clinical setting5. demonstrate an understanding of IMRT and VMAT planning

Content:

Corresponding to Learning Outcome 1

- (a) Calibration conditions
- (b) Inverse square law
- (c) Attenuation factors for SSD and SAD techniques
- (d) Manual calculations of basic radiation therapy SSD and SAD treatment techniques including shielding and extended SSD
- (e) Justification and understanding of factors used and resulting MU

Corresponding to Learning Outcome 2

- (a) Apply computer planning principles and concepts to produce a range of plans of moderate difficulty. Principles to include:
 - isodose distributions
 - ICRU 50/62
 - normalisation
 - weighting
 - beam energy, d-max, exit dose and arrangement
 - beam arrangement
 - inhomogeneities

- wedges
 - monitor units
 - field verification
 - organs at risk
 - diagnostic imaging
- (a) Apply computer planning principles and concepts to critique standard radiation therapy technique computer plans

Corresponding to Learning Outcome 3

- (a) Applied Anatomy
- (b) Cone beam and kV imaging
- (c) Application of CT, SPECT, PET, MRI

Corresponding to Learning Outcome 4

- (a) Radiobiological principles
- (b) Carcinogenesis, mutations
- (c) Teratogenesis, radio-protection
- (d) Acute whole body radiation syndromes
- (e) Acute radiation reactions
- (f) Late radiation reactions
- (g) Tissue tolerance and scoring
- (h) Chemoradiation
- (i) Application of alpha/beta, managing gaps

Corresponding to Learning Outcome 5

- (a) Apply computer planning principles and concepts to produce a range of plans. Principles to include:
- Inverse planning and optimisation
 - ICRU 83
 - Beam angle selection
 - DVH interpretation
 - Organs at risk
 - Beam energy, exit dose
 - Imaging
 - Verification and quality assurance
 - Monitor units

Suggested Learning and Teaching Approaches

The learning outcomes of this paper could be achieved by the following:

- practical laboratory tutorials for computer planning
- student centred tutorials with an emphasis on class discussion and debate
- the use of media such as videos, journals, and texts, will provide a rich source of material for discussion, and exploration;
- IMRT/VMAT focused workshop

Assessment of Learning Outcomes

Summative assessment will consist of the following:

- one assignment (dosimetry) = 20%
- one radiobiology test = 20%

- one dosimetry viva (67% pass mark) = 40%
- one portfolio = 20%

One reassessment can occur if the pass mark of 67% is not achieved in the dosimetry viva.

A pass will be awarded to all students who gain 50% overall.

Reporting Results to Students

Results will be reported to students as follows:

Coursework out of 100

Student result notices will carry grades from A to E

APPENDIX A

EXTERNAL MODERATORS

1. **Functions**

- External moderators shall be responsible for providing an impartial evaluation of student assessment for degree programme papers.
- One external moderator will be appointed from the profession to moderate radiation therapy focused written examinations.
- External specialist lecturers moderate other papers, eg. Cancer Cell Biology.

More Specifically

The functions of the external moderators are to ensure that:

- the evaluation of students' performance was fair and impartial;
- the standard of achievement required of students is comparable with that required in other institutions offering degree qualifications.

2. **Specific Responsibilities**

- To report to the Radiation Therapy Board of Studies and Examinations Committee on the effectiveness of assessments and any conclusions drawn from them.
- To have authority to report directly to the Head of Department where there are concerns about standards of assessment and performance.
- To participate as required in any meeting of the Board of Studies and Examinations which relates to results recommended during the moderator's period of office.
- To concur with the form and content of summative assessments for the paper.
- To ensure that the assessments are conducted in accordance with programme regulations.

3. **Appointment Criteria**

To carry out their responsibilities, external moderators must be:

- competent in assessing student knowledge and skills at degree level;
- expert in the field of study concerned;
- impartial in judgement;
- properly briefed on their role and on the guiding principle and philosophy of the course.

4.

Appointment Procedure

- The appointment of all external moderators must be approved by the Board of Studies and Examinations based on the recommendations of the Head of Department.
- External moderators will normally be appointed for a term of three years.
- New moderators should take up their appointment on or before the retirement of their predecessors. Moderators should remain available after the last assessments with which they are to be associated in order to deal with any subsequent reviews of decisions.

INTERNAL MODERATORS

1. Functions

Internal moderators shall be responsible for peer review of student assessment for all degree programme papers.

2. Specific Responsibilities

- To concur with the form and content of summative assessments for the paper.
- To ensure that the assessments are conducted in accordance with programme regulations.

3. Appointment Procedure

The appointment of all internal moderators must be approved by the Head of Department.

APPENDIX B

DEGREE MONITOR

This person will have responsibility for the following:

- appraising the quality management systems for the programme on an ongoing basis;
- assisting the University of Otago in identifying ways to maintain and enhance the quality of the programme;
- notifying the Head of Department and the Board of Studies and Examinations of any concerns regarding the standards or integrity of the programme.

This is to be achieved by:

- Providing verbal feedback to the Head of Department.
- Providing a report on the quality of the qualification, plus the teaching and research that support the qualification, to the Head of Department.

Person Specification

A monitor should:

- Be external to the University.
- Act as a critical colleague and make constructive comment.
- Possess appropriate research and academic expertise and experience to support a sound judgement on the quality of the qualification and the systems which support it.

In appointing a monitor the following should be taken into account:

- Qualifications appropriate to the profession.
- Present and/or past position of employment, preferably a current or recent academic position.
- Breadth of experience across teaching, research and/or employment.

Appointment Process

The appointment is approved by the Radiation Therapy Board of Studies and Examinations.

Term of Monitoring

Monitors will normally be appointed for a period of three years and will not normally serve for more than six years in total.

Procedures

A copy of the Annual Self Evaluation Report will be sent to the monitor which will include:

- A copy of the External Moderator's Reports
- A copy of the Research Report
- A five-year projected research plan and objectives for the department
- A copy of staff professional development reports

Monitor's Report

Content:

The report will address the following issues:

- An outline of the monitoring process
 - areas visited
 - meetings held
 - summary of topics discussed
 - any recommendations for future action
- Progress in responding to matters specified in the self-evaluation report.
- Progress in responding to recommendations at the previous monitor's visit.
- Moderation processes and performance.
- Proposed changes to the programme.
- Areas of strength and good practice.
- Areas of concern.
- Appropriateness of infrastructure to support research.
- Physical and financial resources in the context of achieving teaching and research objectives.
- Overall quality of research in the context of international research in similar areas.

Report:

- The report will be drafted and submitted to the Head of Department for comment.
- Any discrepancies must be discussed between the Head of Department and the monitor.
- The final signed report will be submitted to the Radiation Therapy Board of Studies and Examinations through the Head of Department.

Response:

- A draft response will be prepared by the Head of Department.
- The report and draft response will be discussed at the Radiation Therapy Board of Studies and Examinations where the final response from the University will be approved.
- The Head of Department will submit the response to the report to the monitor.

APPENDIX C

Minutes of the special meeting of the Academic Board held on Wednesday 25 October 1995

Present: Trevor Boyle (Chair), Mike Marfell-Jones, Richard Winder, Packiam Skinnon, Tommy Honey, Jill Harris, Tim Lockyer, Murdoch Pahi, Mike Cooper, Stuart Arden.

Apologies: Christine Roberts, Andrew Logan, Sheena Hudson

1. **Validation Committee recommendations**

The following programmes were presented by the Validation Committee for endorsement by the Academic Board:

Bachelor of Design
Bachelor of Health Sciences (Radiation Therapy)
Bachelor of Health Sciences (Radiation Therapy) conversion
Bachelor of Applied Technology
Bachelor of Counselling Studies
Bachelor of Hospitality Management
Bachelor of Tourism Management
Master of Science (by research) and Doctor of Philosophy

Richard Winder noted that of these, only Bachelor of Health Sciences (Radiation Therapy) had satisfied the Validation Committee's conditions.

95/139 **Resolved**

That the Academic Board approves the programme and recommends to Council the approval of the **Bachelor of Health Sciences (Radiation Therapy)** as a three year full time programme for 1997 to 2001 inclusive. Enrolment will be onto the full programme or part time on individual modules. Stage 1 of the programme is 33 teaching weeks plus 7 weeks of vacation, a total of 40 weeks. Stages 2 and 3 are 36 teaching weeks plus 3 weeks of vacation, a total of 39 weeks.

Bachelor of Tourism Management

Richard Winder advised that this degree had been removed from consideration.

The remaining programmes were to be considered at a special Academic Board meeting to be held on :

Monday, 30 October 1995, 3.00pm, in the New Council Room.

2. **Formal Thankyou**

The Academic Board thanked with acclamation the Academic Registrar and his various Validation Committee teams for their tremendous efforts in the degree development process.

The meeting closed at 9.00am.

Signed:

Chairperson

Barry Dawe,
NZ Qualifications Authority,
P.O. Box 160,
WELLINGTON

Dear Barry,

Thank you for your letter of 1 August, 1996 advising of the resolution by the Board of the Qualifications Authority in respect of the Bachelor of Health Science (Radiation Therapy) degree.

The purpose of my letter is to confirm my understanding and acceptance of the four part resolution contained in your letter referring to the BHSc and the associated Conversion programme.

Thank you for your advice of the outcome.

Yours sincerely,

MICHAEL H. COOPER
Principal and CEO

Central Institute of Technology, Somme Road, Heretaunga
P O Box 40-740, Upper Hutt, New Zealand, Telephone (04) 527 6398, Facsimile (04) 527 6359
Auto Attendant (04) 527 6397

Degree and Post-graduate qualification approval and accreditation allows you to publicise the status of the programme by the following words on certificates and publications:

"This degree is approved by the New Zealand Qualifications Authority under the provisions of the Education Act 1989, and Central Institute of Technology is accredited to offer it."

The approval and accreditation is dependent upon your organisation maintaining the same standards as were documented and demonstrated in your application, and during the approval and accreditation process. If there are any significant changes you must advise NZQA immediately.

Subsequent to approval being granted, Qualifications Authority monitoring will be applied. You will be required to pay all costs relating to the monitoring process.

The approval and accreditation will be reviewed periodically. The first review date has been set at November 2001. Three months before this date information will be sent to you on the report which will be required. Two months before the review date you should send the Authority a report on the course and its delivery. You will be required to pay all the costs relating to this review.

Please convey my congratulations to members of Central Institute of Technology who contributed to the success of this degree approval process.

Yours sincerely

Barry Dawe
Team Leader
Quality Assurance
