Health, Environment and Climate - a global health approach

The world's population is facing challenges ranging from air pollution to climate change to a lack of access to safe drinking water, sanitation and hygiene. Changing the way we plan our urban environments offers a game changing opportunity for public health.

Dr Nathalie Röbbel

Nathalie Röbbel is the Coordinator for Air Pollution and Urban Health at the WHO. Prior to this she was a technical officer in the Department of Public Health, Environmental, and Social Determinants of Health at WHO in Geneva leading the department's work on housing and health. One of her main areas of work was the development of WHO Housing and Health Guidelines and WHO's efforts to address slum upgrading through housing policies and other social policies and interventions. Nathalie holds a Ph.D. in sociology from the Rheinische-Friedrich-Wilhelms University in Bonn, Germany.

Monday 25th February, 5:15pm

University of Otago, Wellington
23a Mein St, Newtown
