

My Timetable Widget

The “My timetable” widget lets students quickly see their upcoming classes and course activities. It gives an at-a-glance view of their daily schedule directly on the Student Portal homepage.

Default view

In the default view, the widget shows a student’s classes for the current day. Each entry displays:

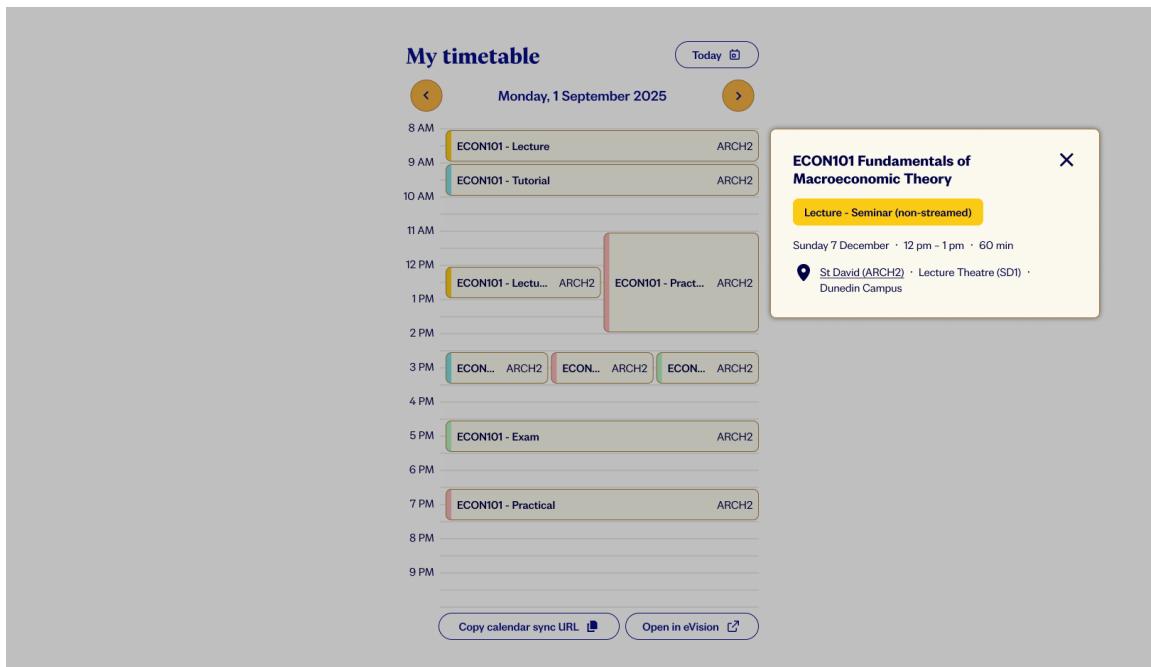

- The paper code and title
- The type of class (for example, lecture or lab)
 - Class types are color coded as follows:
 - Yellow: Lecture
 - Blue: Tutorial
 - Pink: Practical
 - Green: Lab
 - Orange: Other
- The time and building code (i.e. F503)

Students can use this view to confirm where and when their next class is without needing to open their full timetable.

A link is provided to open their full timetable in eVision, where they can view all enrolled papers and timetable details in full.

Students can click a button to copy a unique link that lets them sync their timetable with their personal calendar (for example, Google Calendar or Outlook). For more help adding a calendar link, see the official guides for [Google Calendar](#), [Outlook](#), and [Apple Calendar](#).

Detail view

When a student selects a class from the widget, a small detail window opens with more information. This includes:

- The full paper name and code
- The session type (lecture, tutorial, etc.)
- Date, time, and duration
- Building and room details, including a link to open the building's location in Google Maps

This view helps students double-check the details of a particular class without leaving the Student Portal.

Key points for staff

- The widget pulls timetable information automatically from the central scheduling system.
- Students cannot edit or change their timetable through this view.
- It is designed for quick reference, not for managing enrolments or class changes.
