

BITC201

Bioethics and the Life Sciences

18 points | 1st semester | Prerequisites: 126 points

Biological science has enormous power to influence lives, and shape life itself. Bioethics allows us to understand the use and abuse of this power in science, and promote scientific integrity.

- Ways of thinking systematically about the ethics of science
- Scientific fraud/misconduct
- Handling data ethically
- Collaboration between science and big business
- Human participant research, vulnerable participants, and international research
- Ethics of genetic manipulation in humans and animals
- Animal experimentation

Available for degrees
in Science, Health
Sciences, Arts and
Music
