

Paper co-ordinator and lecturer

Murat Genç

Room: 5.10 OBS

Telephone: 479 8644 or 021 220 8565

Email: murat.genc@otago.ac.nz

Office hours: Usually any time after 11am until 5pm during the day, from 9pm to 1am in the evening, provided that I am in my office. I do teach most days though, so check my timetable on my door.

Lecture times

Monday 3-3:50pm

Thursday 2-3:50pm

Learning aims and objectives

This paper provides students with practical experience of applying standard microeconomic techniques, focusing upon interpretation of results from different estimation procedures. The paper has a practical flavour. The emphasis is not on proofs but on intuition and on applications. This is because the purpose of the course is to prepare students for their own empirical work by giving them hands-on experience in applying contemporary econometric techniques, with examples drawn from the literature. Taking a research-driven and applied approach, the course will guide students through a selection of methods in applied microeconometrics and a replication of a recently published paper in a top journal.

Assessment

The overall grade for this course is determined as follows:

- | | |
|---|-----|
| • Three computer assignments at 15% each | 45% |
| • Replication of a published paper | 35% |
| • Class presentation of an applied paper published in a journal | 20% |

Further details on the replication project and the presentation will be provided later.

Plagiarism/Dishonest practice:

Students should make sure that all submitted work is their own.

Tentative Topics:

- Maximum likelihood estimation and nonlinear regression methods
- Binary outcome models
- Fractional response models
- Count-data models
- Corner solution responses
- Censored data
- Sample selection
- Pooled Cross Sections and Difference-in-Differences Estimation
- Linear panel data models
- Causality: Treatment effects
- Propensity scores, regression discontinuity
