Pain in Children and Young People: What do we know?

11 July | 6 - 7.30pm | St David’s Lecture Theatre or Online at otago.zoom.us/j/326254470

Persistent pain in children and adolescence is a significant health burden on family and society. This panel discussion will highlight recent research in this area and discuss the best treatment approaches, encompassing the holistic experience of pain, for providing support to enhance function, despite having pain.

Proudly part of the New Zealand International Science Festival
