Rocky Shore Scientists...

- ★ Keep their feet out of the square.
- ★ Look very carefully with their eyes and talk about what they can see, e.g. *shape, colour, size, animal, plant*

★ Share what they see with other scientists. *Do they think the same as you?*

★ Ask lots of questions.

PARENTS:

Please record what the scientists see and briefly how they describe it e.g *snail - small, black shell*

If possible count and record how many of each creature/ plants they can see e.g *snail - small, black shell, 6*

Decide on one creature or plant from each quarter, that the scientists agree, they would like to find more out about. Record the creature/ plant in the matching Marine Window. (*How you record this information is up to you e.g. sketch, write questions, write animals/ plants name if known.*)
