Sexual and Reproductive Health and Behaviour in the Dunedin Birth Cohort

Associate Professor Nigel Dickson

The Dunedin Multidisciplinary Health and Development Study (DMHDS) is a detailed study of human health, development and behaviour following the lives of 1,037 babies born in 1972 and 1973.

Sexual and reproductive health and behaviour was first studied when they were aged 18 in 1990/1991. Since then information has been sought at ages 21, 26, 32 and most recently at age 38 in 2010/2012. Internationally this component of the DMHDS is now the longest running comprehensive cohort study of sexual health and behaviour.

Assoc Prof Nigel Dickson is an epidemiologist at the Department of Preventive and Social Medicine, University of Otago, Dunedin and Director of the AIDS Epidemiology Group there. He has been involved in the study of sexual and reproductive health and behaviour in the DMHDS since 1990.

Friday 31 October 2014
12.30 to 1.30
Small Lecture Theatre

ALL WELCOME!
