The built environment sector is one of the largest producers of carbon emissions in New Zealand. How do we get the sector to carbon zero by 2050?

It is easier and cheaper to make low carbon decisions at the design stage than to retrofit existing buildings. To reduce emissions by 2050 we need to begin NOW on the path to improved building techniques, building standards, workforce development and community buy-in. This symposium will bring together actors from the various sectors New Zealand needs to make carbon neutral buildings a reality.

Register now for this Public Health Summer School symposium

**Presenters include:**
- John Mandyck - CEO Urban Green Council, USA
- Andrew Eagles - NZ Green Building Council
- Matthew Daly - Sustainable Building Research Centre, University of Wollongong, Australia
- Philippa Howden-Chapman - NZ Centre for Sustainable Cities, University of Otago, Wellington

**Tuesday 11 February 2020**
University of Otago, Wellington  |  Mein Street  |  Newtown  |  Wellington
